DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling.

FOR USE IN INDUSTRIAL RECIRCULATING WATER COOLING TOWERS AND EVAPORATIVE CONDENSERS

ANCOCIDE 4040 is a highly effective fungicide, bactericide and algacide for use in controlling the growth of fungi, bacteria and algae found in industrial recirculating water cooling towers and evaporative condensers.

Dosage for industrial recirculating water cooling towers or evaporative condensers will depend on the condition of the system prior to treatment initiation. Systems which are heavily contaminated should be cleaned first. Apply **ANCOCIDE 4040** to the cleaned system or when growth is first noticed, according to the following schedule:

Initial Dose: Apply 6 - 15 ounces of product per each 1000 gallons of water in the system (40 - 120 ppm). This dose may be repeated once, twice or three times weekly or as required to control the growth of slime-forming organisms. Slug addition should be made in the sump of water cooling towers.

Subsequent Dose: When microbial control is evident add 1.5 - 15 fluid ounces of **ANCOCIDE 4040** per 1000 gallons of water (12 - 120 ppm) in the system every three days or as needed
