SANI-MOP-MIST

BACTERIOSTATIC MOP TREATMENT

A scientifically designed floor treatment and polish for use with sweeping mops and dust cloths. It cleans, polishes and protects your fine floors by effectively removing dust and loose dirt which are the major causes of floor wear. It eliminates the nuisance of dust raised by the sweeping operation. This bacteriostatic treatment inhibits the growth of bacteria in mops and cloths, aids in reducing the spread of dust borne bacteria. It is safe to use on all floors when used as directed. Its clean wintergreen fragrance aids in reducing objectionable odors.

Directions

Spray or sprinkle the entire mop until it is moist, not wet. Repeat this step whenever necessary. Ends of mop strands should not be wet. Use sparingly. A little goes a long way. Sweep normally with mop until it becomes soiled then unload mop by shaking sharply. This product causes dust and dirt to cling together in coarse particles and permits the mop to be unloaded anywhere without recirculating dust. To treat dust cloths: Sprinkle any soft lintfree cloth. Roll tightly and store for 24 hours before use.

ACTIVE INGREDIENTS:
Methyl Salicylate
Chloro - 2 - Phenyl - Phenol
