

Moth Control is intended for control of clothes moth and carpet beetle in clothing manufacturing plants, clothing stores, tailor shops, fur shops and similar locations.

Control of moth and carpet beetle is achieved by periodic spraying of the affected areas so that the fabric, clothing or garment itself is contacted by a light spray sufficient to kill exposed insects, but not heavy enough to wet the fabric, as well as by spraying certain physical parts of the building or storage area itself to reach breeding locations.

Insects directly contacted by the spray will be killed.

WARNING: Contents of this can are under pressure. Do not store near heat, in direct rays of the sun, in closed cars in the sun or in any other location where temperatures will exceed 110 deg. F. If exposed to high temperatures excessive pressure will develop and may cause can to burst as with any aerosol bomb. Do not puncture or incinerate can.

Keep out of reach of children. Avoid contamination of foodstuffs. Do not use on humans, pets or plants. Remove bird cages and fish bowls from room before spraying. Avoid inhalation of spray. Avoid skin contact. May be absorbed through skin. In case of contact wash immediately with soap and water.

This product is toxic to fish and wildlife. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

ORB INDUSTRIES INCORPORATED
Upland, Penna. 19086

CAUTION: KEEP OUT OF REACH
OF CHILDREN. SEE ADDITIONAL
CAUTIONS ON RIGHT HAND PAGE.

DIRECTIONS: Hold bomb about 2 feet away from clothing and spray so that aerosol particles lightly contact all surfaces, but not heavy enough to wet fabrics. In the case of clothing hung on racks, separate such clothing so that the spray mist will penetrate between the clothing and reach all exposed insects. In case of woolens, sweaters, blankets and similar items stored in drawers or on shelves, they should be removed and lightly sprayed if any infestation is present. Additional protection may be had by spraying the inside surfaces of storage drawers, bins, cabinets or shelves.

Carpet beetles and clothes moth breed on the accumulations of woolen lint and dust which settles in cracks and other spots and which remains undisturbed for long periods of time. Such spots should be thoroughly sprayed to control any potential infestations and thus give better overall control.

Treatment should be made at frequent intervals, no longer than three weeks to one month apart and whenever moth or carpet beetle are seen.

When actual "mothproofing" is required to protect clothing stored for extended periods, use our Mothproofer.

Active Ingredients:

Gamma isomer of benzene	
hexachloride from lindane	0.10%
Diethyl diphenyl dichloroethane	4.75%
Related reaction products	0.25%
Petroleum solvent	14.09%

Inert Ingredients: 80.00%

Net Contents: 1 pound Avdp.
