DUAL SYNERGIST PYRETHRUM INSECTICIDE

NET CONTENTS ----- GALLONS **FORMULA No. 923** EPA REG. NO. 4297-3

DIRECTIONS FOR USE:

For the control of: flies, mosquitoes, gnats, hornets and wasps. A fogging or atomizing device may be used to treat enclosed spaces. Use three ounces of 923 per 1000 cu. ft. of space. Rooms should be kept closed for 10 to 15 minutes after fogging. Personnel should leave the room during this period. After treatment is complete, ventilate the room thoroughly. Sweep and destroy fallen insects. A portable spraying device may be used to treat areas where fogging is not practical. Spray at the rate of one-half gallon per 100 sq. ft. Use No. 923 in areas where insects are a nuisance or may create a health hazard.

Use in food processing plants only when plant is not in operation. When used in food areas, all food handling equipment should either be covered or washed down after spraying to prevent possible contamination of food. Food should also be covered or removed from the room.

Remember that while Brooks Pyrethrum Spray No. 923 is a very effective insecticide it must be applied in such a manner that it comes in direct contact with the insect or larvae to be killed.

Active Ingredients 100%

Piperonyl Butoxide Technical* -----	0.150%
Pyrethrins -----	0.075%
N-Octyl Bicycloheptene Dicarboximide -----	0.250%
Petroleum Base Oil -----	99.525%
	<u>100.000%</u>
