**ASCO LABORATORIES - HUDSON, N. H.**  
 "MODERN PRODUCTS FOR SUCCESSFUL PEST CONTROL"

## ANT-LINE

ELIMINATES ENTIRE COLONIES — ASSURES COMPLETE CONTROL.

There are many fine products available today for killing ants and roaches. However, they all work by killing the individual ant or roach which contacts the poison. As a result, dead ants and roaches are found surrounding the traps or surfaces treated.

Ant-Line works more neatly and effectively. Ants, roaches, silverfish, etc., have hollow legs and absorb oxygen through them directly into their bloodstream. When they contact Ant-Line, they take in enough to bring about death in 2 to 4 hours. This slow action gives them time to get back to their nests where death takes place. After death, their carcasses are eaten by friends and relatives and, because of the contaminated condition of the fluids in the carcasses, the friends and relatives are in turn poisoned. Thus, when we say, "If they cross the line today, they won't be back tomorrow", it is so, because the colony is extinct.

- No arsenic, no danger to children and pets.
- Clean and odorless.
- Effectiveness longer-lasting than that of any competitive product.
- Contains synergized chlordane, the best and safest killer of ants, roaches, silverfish, etc.
- More economical.
- Ants have to FIND traps. They usually cannot avoid Ant-Line and do not try to because Ant-Line contains both sorghum and edible tallow, which actually ATTRACT both sweet— and grease-eating ants.

### ANT-LINE TRADE MARK KILLS ANTS • ROACHES

**DIRECTIONS:** Mark a line on floor all along baseboards, around window casings, on thresholds, around sinks and cabinets, and other places, in infested rooms, where ants or roaches may cross. Repeat as necessary.

**ACTIVE INGREDIENT:** \*Technical Chlordane . . . . . 2%  
**INERT INGREDIENTS** . . . . . 98%  
 \* Equivalent to 1.2% Octachloro-4, 7-Metahydroindane and .8% related compounds.

**CAUTION:** Harmful if swallowed. Keep out of reach of children. Avoid contamination of foodstuffs.
