

BEESTROY

U. S. D. A. Reg. No. 1522-1

8 fluid oz. **Fireproof**
Active Ingredients
Petroleum Distillate 28%
*Technical Chlordane 12%
Turpentine 10%
Inert Ingredients 50%
*Equivalent to 7.2% Octachloro-
4, 7 - methanotetrahydroindane
and 4.8% of related compounds.

CAUTION:

Chlordane is toxic and when in solution can be absorbed through the skin. Harmful if swallowed. Avoid inhaling mist from spray and wash up when through. Avoid contamination of feed and food-stuffs. Do not use indoors except as directed.

Warning:

Keep out of reach of children. See other warning on directions.

Beestroy Directions

Preferably on a cold day when bees are confined squirt Beestroy into the opening where bees enter the outside wall using a thumb pump type oil can. Shake well before pouring from can.

Listen for hum of bees by holding one ear tight against inner wall. Tiny holes (7/32) can be safely drilled to the bee nest, through the inside wall and Beestroy squirted through them. In cool weather place can in warm water a while before using.

Beestroy cannot do its job unless applied in the right place. You may have more than one colony. Within a few days, seal all outside openings where bees can enter.

Remove honey if in the ceiling to prevent leaking through. It seldom causes trouble in a side wall.

Warning:

Do not eat honey from destroyed colony.

Do not expose contaminated honey within reach of other bees, pets or children.
