Under the Fade of Insecticide, paenticide Act. Funcione. _{∞ postic**ide**} as ame: registered 10 4581-292

ACCEPTED

PRECAUTIONARY STATEMENTS HAZARDS TO HUMANS AND DOMESTIC ANIMALS

WARNING

FIRST AID: Atropine is Antidotal - Consult your Physician for Emergency Supply. If symptoms or signs of polsoning include blurred vision, abdominat cramps and tightness in chest, don't wait for a doctor but give two atropine tables (each 1/100 gr.) at once. Keep out of reach of domestic animats. Do not contaminate food, feed or use on household pats or livestock.

ENVIRONMENTAL HAZARDS

This peaticide is extremely toxic to wildlife and fish. Use with care when applying in meets frequented by wildlife or adjacent to any body of water. Birds and other wildlife feeding in treated areas may be

or water. Birds and other wildlife feeding in treated areas may be killed. Keep out of lakes, ponds and streams. Do not apply when weather conditions tavor que off or chilt from target areas.

This product is highly togic to be a exposed to direct treatment or residues on crops or weeds. Do not apply PENNCAP-M, or allow it to drift, to weedstate bloom off which an oconomically significant number of bers say actively foreging. Protective Information may be obtained from your Coopyrative Agricultural Extension Service.

DIFFECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

RE-ENTRY STATEMENT

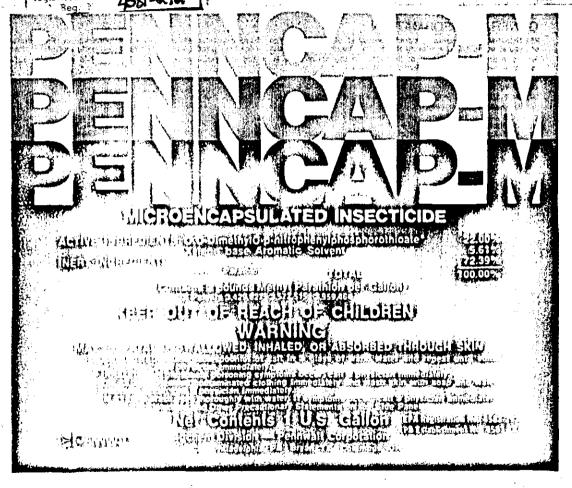

Do not enter treated fields without protective clothing before spray dries. Consult your State Agricultural Experiment Station regarding special local restrictions.

STORAGE AND DISPOSAL

Do not contaminate water, food, or feed by storage or disposal, Open dumping is prohibited. Pesticide, spray mixture, or rinsate that cannot be used or chemically reprocessed should be disposed of in a landfill approved for posticides or buried in a safe place away from water supplies. Do not contaminate water by cleaning of equipment or disposal of wastes.

Puncture container for disposal in approved tandfill or bury to a safe

Consult federal, state, or local disposal authorities for approved alternative procédures.

GENERAL INFORMATION

PENNCAP-M is a special product consisting of polymeric-type micro capsules which contain methylparathlon. Formulation is a flowable type, i.e., capsules are suspended in water. It is applied by sir or ground equipment by dituting it with an amount of water suitable for the specific crop and type of spraying equipment. For air application, except as noted, use at least two gallons total apray per acre. First add approximately half of the water to the spray tank, then add the required quantity of PENNCAP-M with good agitation, and finally add the rest of the water. This procedure should be followed to insure proper mixing of PENNCAP-M.

Mixtures of PENNCAP-M with emulsifiable concentrates, organic solvents, or some surfactants may cause increased toxicity and shorter residual effectiveness. This effect is more pronounced with concentrated sprays and extended periods between mixing and application.

DO NOT USE SCREENS OR NOZZLES FINER THAN 50 MESH.

Stir or Shake Before Using.

COTTON — For the control of boil weevil (in the absence of boilworm), apply PENNCAP-M at the rate of 2 to 3 pints per acre. For boil weevil, make applications at 5 to 7 day intervals. Start applications at 10% to 25% punctured squares. Continue as needed. For control of boilworm and tobacco budworm, apply PENNCAP-M at the rate of 4 to 6 pints per acre. Make applications when numbers of worms are expected to be damaging. Make second application 3 to 5 days later. Continue applications at 5 to 7 day intervals as required. Do not apply within 7 days of hand picking or harvest. COTTON — Application of PENNCAP-M in Tark Mixtures with Soluble Powder Formulations of Chlordimeform Hydrochlorids — All cotton growing areas except California and Arizons.

For the control of boll weavil, bollworm, and tobacco budworm, apply a tank mixture of 2 to 3 pints of PENNCAP-M and 16 to 16 pound chlordimetorm hydrochloride (Galecron@SP) or Fundai@SP) per acre. Always prepare fresh mixtures just prior to use. Make applications when insects are expected to become damaging. Continue applications at 3 to 5 day intervals as required.

Do not apply mixtures of PENNCAP-M with Galecron@SP or Fundai@SP within 21 days of harvest. Do not teed foliage from

On not apply mixtures of PENNCAP-M with GalocromasP or FundalpSP within 21 days of harvest. Do not tend foliage from treated cotton plants or gin trash to livestock. Observe all limitations, precautions, and rate recommendations which appear on the labels for these products.

Workers entering fields within 24 hours should wear waterproof or freshly taundered protective clothing, including coveralis,

SOYBEANS — For the control of velvetbean caterpillar, stink bug, and Mexican bean beetle, apply PENNCAP-M at 2 to 3 pints per

acre.
For the control of bean leaf beetle and corn earworm (podworm), apply PENNCAP-M at the rate of 4 pints per acre. Repeat as needed, Do not apply later than 20 days before harvest or grazing. Do not apply more than 2 applications per season.
TOBACCO—For the control of tobacco budworm, apply PENNCAP-M at the rate of 4 to 6 pints in 18 to 40 gallons of total spray per

TOBACCO—For the control of tobacco budworm, apply PENNCAP-Ma the rate of 4 to 6 pints in 18 to 40 gallons of total spray per acre. Continue applications at 5 to 7 day intervals as required. For the control of tobacco hornworms and aphids, apply PENNCAP-M at the rate of 4 to 6 pints in 25 to 40 gallons of total spray per acre. Do not apply within 15 days of harvesting by cutting. Do not

apply within 5 days of priming. Avoid contact with plant julcas when priming or cutting tobacco. When necessary to enter treated fields within 48 hours after application, protective clothing should be wern.

CORN (Sweet) — For the control of corn earworm and European corn borer, apply PENNCAP-M at the rate of 2 pints per acre on a 1 to 2 day schedule or at the rate of 4 pints per acre on a 2 to 5 day schedule. Start applitions when sitking starts and continue applications as required. Do not apply later than 3 days before harvest. Do not cut for forage or graze within 12 days after application.

ALFALFA — For the control of alfalfa weevil and pea aphid, apply PENNCAP-M at the rate of 2 pints per acre. For control of Egyptian alfalfa weevil, apply at the rate of 2 pints per acre. For control of blue alfalfa aphid in California and Artzona only, apply PENNCAP-M at the rate of 1½ pints per acre.

Do not spray attalfa during bloom to avoid injury to bees. Do not apply within 15 days of harvest or grazing. PEAS — For the control of pea applid, pea weevil, and pea leaf weevil, apply PENNCAP-M at the rate of 2 plnts per acre. For control of pea leaf weevil and pea weevil by serial application, a minimum of 5 gallons per acre of finished spray should be applied. Repeat application as necessary for control.

Do not apply to Austrian winter peas during bloom to avoid lajury to bees. Do not apply within 10 days of

PEAS FOR FORAGE -- Do not make more than 1 applitation per year. Do not harvest or graze within 15 day of application.

BEANS (Snap, Lima, and Dry) (Southeastern United Status only) — For the control of Mexican bean beetle, apply PENNCAP-M at the rate of 2 pints per acre. Start application when insect damage threatens. Do not apply within 15 days of harvest. On snap beans, do not apply after god formation.

ONIONS (Dry onions and onions grown for seed only) — For the control of thrips, apply PENNCAP-M at the rate of 2 pints per acre. Start application when insect damage threatens. Repeat as required. Da not apply when onlons are blooming to evold injury to bees. Do not apply within 15 days of harvest.

RICE—For the control of stink bugs, apply PENNCAP-M at the rate of 1 to 2 pints per acre. For the control 5.8056-1463M when insect damage threatens. Do not apply within 15 days of harvest. Oo not apply PENNCAP-M within 14 days of application of propanil.

WHEAT — For the control of greenbugs, apply PENN-CAP-M at the rate of 1 to 1½ pints par acre. For best results use at least 2 gallons of total apray per acre.

of grasshoppers, use 2 pints per acre. Start application

CAP-M at the fate of 3 to 392 pints per acre. For pest results use at least 2 gallons of total spray per acre when applied by air. For the control of grasshoppers, apply PENNCAP-M at the rate of 2 pints per acre. For air application, use at least one gallon total spray per acre. Starl application when insect damage threatens. Do not apply within 15 days of harvest or grazing. RANGELAND AND PASTURE (including grass for seed

MANGELAND AND PASTURE (Including grass for seed production) — For the control of grasshoppers, apply PENNCAP-M at the rate of 2 pints per ecre. Start application when insect damage threatens. Do not apply within 15 days of harvest or grazing.

PEACHES — For the control of plum curcuito and oriental fruit moth, apply PENNCAP-M at 2 pints per 100 gailons of ditute spray. For concentrate or aeriel application, apply PENNCAP-M1 at the rate of 6 pints per acre. Start application when insect damage threatens. Do not use more than 2½ gailons (5 pounds active) per acre per year. Do not apply later than 14 days before harvest. Do not graze or feed cover crops from treated orchards. PEACHES IN CALIFORNIA — Do not apply within 21 days of harvest. Do notiuse more than 2½ gailons (5 pounds active) per acre from January 1 to harvest. Do not graze or feed cover, crops from treated orchards. APPLES AND PEARS — For the control of San Jose scale (Northwest only) and codling moth, apply PENN-CAP-M at the rate of 1 to 2 pints per 100 gailons of dilute suray or 4 to 8 pints per acre for concentrate applications. For the control of plum curcuito, use 2 pints per 100 gailons or 8 pints per acre for concentrate applications. Do not use more than 3 gailons PENN-CAP-M (6 pounds active) per acre per year. Do not apply within 14 days of harvest. Under heavy insect pressure use the higher dosage; consult your local experiment stallon for proper timing of sprays,

since injury to fruit and foliage may result.
GRAPES — For control of grape leathopper, apply
PENNCAP-M at the rate of 4 pints per acre. Start apply
cation when insect damage threatens. Do not apply

within 14 days of harvest.
