DIRECTIONS FOR USE

IT IS A VIOLATION OF FEDERAL LAW TO USE THIS PRODUCT IN A MANNER INCONSISTENT WITH THE LABELING.

NOTE: Add DARACIDE® 2302 separately to the system. To avoid any possible incompatibilities, do not mix it with other additives.

Industrial and/or Commercial Open Recirculating Cooling Water Towers: *Slug/Intermittent Feeding:* Initial Dose: When microbiological slimes are evident, apply 9.3 to 18.6 fl ozs of DARACIDE 2302 per 1000 gals (75 ppm to 150 ppm) of water in the system. Repeat until control is achieved. Badly fouled systems should be cleaned before treatment is begun.

Subsequent Dose: When microbiological control is evident, apply 6.2 to 12.4 fl ozs of DARACIDE 2302 per 1000 gals (50 ppm to 100 ppm) of water in the system once per week or as needed to maintain control.

Application of Product: DARACIDE 2302 could be fed at full strength in the cooling tower basin at a point of maximum water circulation. Tower bleedoff valves should be closed to permit a retention time of 4 hours.

Pulp and Paper Mills: Dosage will vary from 4.8 to 9.6 fl ozs of DARACIDE 2302 per ton of finished paper depending on the type of stock, complexity of the system, quality of raw water, and type and degree of contamination.

Application of Product: DARACIDE 2302 may be drip fed continuously from the drum or fed by suitable chemical pumps such as adjustable proportioning type; variable speed, positive displacement type; or reciprocating type. This product should be fed as early as possible in the system at such points including the hydropulper, machine chest or broke system.

DARACIDE 2302 cannot be used to control slime on machines which make paper and paperboard for use in food packaging.
