

PENETRATING TOXIC
Termite Resistant

CAUTION: COMBUSTIBLE MIXTURE-
N.Y.F.D. C. OF A. #2200
DIRECTIONS

PENETRATING TOXIC is a prime coat for all kinds of wood, inside or outside, where protection from termites, insect bores, dry rot, mildew or fungus is needed.

For PENETRATING TOXIC to be effective, the wood must be coated on all sides with one flowing coat or dip. Wood in contact with the ground must be coated with two flowing coats, or dipped at least 3 minutes.

PENETRATING TOXIC is not designed as a treatment against existing infestation. Where such exists, consult proper authorities.

PENETRATING TOXIC should be applied on new wood, or old wood that has been scraped down to the bare wood. It is designed to soak into the fibers of the wood, not to build up a surface film.

Allow to dry 24 hours before applying top coats.

PENETRATING TOXIC covers approximately 400 to 700 square feet per gallon, depending on porosity of wood.

LUMBER LIFE PRODUCTS can be thinned with turpentine or paint thinner.

WARNING - FLAMMABLE Keep away from heat and open flames. Avoid contact with face, eyes, breathing apparatus and clothing. Avoid contact with skin. Use with adequate ventilation. Do not take internally. Before smoking, eating or after using, wash hands thoroughly.

4. Patio Furniture Finish—Redwood or Clear
 The finish is a clear, penetrating, non-toxic
 preservative that will protect your patio furniture
 from rot and decay.

CAUTION: Lumber Life products must be used in accordance with the directions on
 this label to get satisfactory results. When only Clear Gloss is used, you lose the
 value of the protective shield against the sun's ultra violet rays offered by one
 of the Preservatives.
 Lumber Life products (except Patio Furniture Finish) dry with a soft film and should
 not be put on those places that may come in contact with hands or feet.

LUMBER LIFE PENETRATING TOXIC
