

DIRECTIONS FOR USE

APPLY AS A SPRAY — Use a hand mast type or pressure sprayer. Two flowing coats of Penta 5 are usually sufficient to protect joists, timbers and other wood work from Lyctus Powder Post Beetles and Wood Rotting Organisms. Treat all structures which come in contact with the soil. Spray all ends and joints of wood for a distance of 3 to 4 feet as well as sections around chimneys, cellar stairs, vent pipes and porches.

APPLY WITH A BRUSH — When applying with a brush make sure that the material penetrates the wood. Make a second application to insure proper treatment. Allow the material to freely flow over the areas to be treated paying special attention to the ends and joints for a distance of 3 to 4 feet.

DIPPING OR SOAKING — To protect dry and well seasoned timbers, posts and other heavy wood members before construction or before placing wood in contact with the soil, dip each wood member for 12 to 48 hours to give effective penetration of the wood. Fabricated products such as doors, windows, etc., should be dipped 3 to 30 minutes. All wood members should be free of bark before receiving treatment.

WINTER GRASSES AND BROAD LEAVED WEEDS IN DORMANT BERMUDA TURF: To control Chickweed, Hairy Chess Grass, Rescue Grass, Cheat, Annual Bluegrass, Plantains, June Grass and Little Barley Grass, add 1 qt. and 2 ounces of Penta 5 to 2-1/2 pts. of Kerosene. Spray this dilute mixture over 1000 sq. ft. of turf area to thoroughly cover the undesirable weeds and grasses. Apply to the lawn only when the Bermuda Grasses are dormant in the fall and winter after the tops have been killed or in early spring before the new growth starts. Do not increase dosage rates since injury may result to the permanent grasses.

PENTA 5

For Use In the Preservation of Wood Structures
on Farm and Home

WARNING: KEEP OUT OF REACH OF CHILDREN

See Side Panels for Additional Warnings

ACTIVE INGREDIENTS:

Pentachlorophenol	4.4%
Other Chlorophenols6%
Mineral Spirits	90.0%

INERT INGREDIENTS: 5.0%

Total 100.0%

TERMITE CONTROL IN HOUSES — When termites are known to exist in foundation structures such as supporting pillars in steps and porches as well as in house sidings, and upper structures, the soil adjoining the wood or adjacent to termite runs should be treated. Since the Termite nest is in the soil the natural thing to eliminate them is to cut them off from the nest. Open a trench around the foundation or the adjacent wood structures 30 inches deep, but not below the top of the footing if this is more shallow. Treat the bottom of the trench with Penta 5 and then replace the soil in the trench and treat the soil. Apply at the rate of 1 gallon to 1 linear foot of the trench. Inspect treated areas frequently for reinfestations.

WARNING: Harmful if swallowed or absorbed through the skin. Causes skin irritation. Do not breathe vapor, fumes or spray mist. Do not get into eyes, on skin or on clothing. Wash thoroughly. Keep children and animals off treated areas until washed into soil.

Do not reuse empty drum. Return to drum reconditioner or destroy by perforating or crushing and burying in a safe place.

Do not store or use near open flame. Plants or shrubbery should be removed within 3 feet of treatment area or protect with Tar Paper.

This product will kill fish and wildlife. Keep out of lakes, streams and ponds. Do not contaminate water by cleaning of equipment or disposal of wastes. Apply this product only as specified on this label.

NOTICE: Seller warrants that this product conforms to the ingredient statement on the label. Since conditions of use, such as weather, compatibility with other chemicals and condition of application equipment will vary, Seller makes no claims other than those stated on this label.
