PROFESSIONAL

2.5 Lbs. Net Weight

# INSECT BOMB

CONCENTRATED

NON-FLAMMABLE

ACTIVE INGREDIENTS: Pyrethrins 0.50%; \*Technical Piperonyl Butoxide 4.00%, Petroleum Distillates 8.00%.  
INERT INGREDIENTS: 87.50%.  
\*Equivalent to 3.20% (butylcarbityl)(6 propylpiperonyl) ether and 0.8% related compounds.

NON-TOXIC TO HUMANS AND PETS

## CAUTION

Keep out of reach of children. Contents under pressure. Do not puncture. Do not expose container to temperature above 120°F. Never throw container into fire or incinerator. Avoid contamination of feed and foodstuff. Read additional cautions on back panel.

### DIRECTIONS FOR USE

Professional Insect Bomb will effectively control flies, mosquitoes, wasps, gnats, flying moths, roaches, ants, crickets, silverfish and exposed stages of stored products insects, when used as directed.

**FOR FLIES, MOSQUITOES, WASPS AND GNATS:** Close all doors and windows. Point nozzle upward, direct the aerosol mist to all parts of the room, especially windows and other light sources which attract these insects. For best results, keep nozzle in motion while spraying. Allow 3 to 5 seconds spraying time per 1,000 cubic feet of space. Keep room closed at least 15 minutes after each treatment.

**FOR ROACHES, ANTS, SILVERFISH AND CRICKETS:** Open all inside doors, cabinets, closets. Direct the mist toward insects, into cracks, crevices and trails, on door sills and window frames. For initial application, apply for 10 to 15 seconds for each 100 square feet of floor space. Follow this up with periodic space applications at 3 to 5 seconds per 1,000 cubic feet. Keep room closed for one hour after application. Repeat treatment when necessary.

**FOR STORED PRODUCTS INSECTS (EXPOSED STAGES):** For such insects as flour beetles and granary weevils, spray insects, into cracks, crevices and around machinery, around containers of stored products and other areas where these insects may hide. It is important to contact as many insects as possible. A minimum of 30 seconds treatment time should be used per 100 square feet of floor space. Treated area should be kept tightly closed for at least 45 minutes. Repeat treatment when necessary.

**FOR SUCH INSECTS AS FLOUR MOTHS AND INDIAN MEAL MOTHS:** Close all doors and windows. Direct mist to all parts of the room, especially into dark areas around stored products containers where adult moths may be resting. A minimum treatment time of 6 to 8 seconds should be used for each 1,000 cubic feet of space. Keep treated area closed for at least 30 minutes. Repeat weekly or when flying moths reappear.

**CAUTION:** Use the product as a space spray in food processing plants only when plant is not in operation. Foods should be removed or covered during treatment. All food processing surfaces should be covered or thoroughly cleaned before using. Remove Pests, Birds and Fish Bowls from room before spraying.
