FOOD PROCESSING PLANTS

Because of this product's food processing establishments should be closed to the public when the plant is not in operation. Food should be removed or covered during treatment. All food processing surfaces should be covered during treatment and thoroughly cleaned with potable water before using.

Vacate treated areas and ventilate before reoccupying.

For maximum effectiveness, a combination of spot surface treatment and fogging is recommended.

SURFACE SPRAYING: To control cockroaches, palmetto bugs, ants, silverfish, spiders, crickets, clover mites, chorse mites, granary weevils, rice weevils, confid flour beetles, rust red flour beetles, sawtoothed grain beetles, spider beetles, cigarette beetles, drugstore beetles, meal worms, grain mites and mites. Use a good sprayer adjusted to a coarse wet spray. Direct the spray into hiding places, cracks and crevices, under pallets, around containers of stored food, around the base of machinery, behind shelves and drawers, for silverfish, spray bookcases, for ants, wasp trails, nests and points of entry. If surface application only is to be used, spray floors and other surfaces applying at a rate of 1 gallon to 750 square feet of surface.

To control carpet beetles - Spray edges of carpeting and under existing wall papers. Make localized application to floor and baseboards. Spray directly into cracks, crevices and infested areas of shelving. Repeat treatment as needed.

To control fleas - Spray mattresses lightly, particularly around tufts and seams. Take beds apart and spray in all joints, head and foot ends, bedding and floors. Repeat treatment as needed.

To control flea and flea dog ticks - Thoroughly spray infested areas, pet beds, pet kennel floors, utility cribs and crevices, along and behind bookshelves, woodings, window and door frames and entire area of floor and floor covering. Fresh bedding should be placed in animal quarters following treatment. Repeat treatment as needed.

To control clothes moths - Remove any infested articles from storage, dry thoroughly and air for several hours in sunlight, if possible. Apply spray liberally to empty chests, closets, trunks and other storage, directing the spray into cracks, joints and crevices. After airing, infested articles can be treated lightly keeping moisture at least three feet from fabric to avoid staining.

SPRAY FOGGING: Close doors and windows and turn off ventilating systems. Apply with a good sprayer adjusted to deliver a fine mist or fog. For rapid control of house flies, fruit flies, and other flying insects, use a fine mist or fog. For control of crawling insects, use a coarse mist or fog. Apply at a 45 degree angle directed straight and evenly throughout the entire area at a rate of 1 gallon per 1000 square feet of space.

Do not use this product in the vicinity of the above mentioned areas at a rate of 1 gallon per 1000 square feet of space. Do not use this product directly on people or pets.
