INDOORS AS A SPACE SPRAY

To control flies, fruit flies, mosquitoes, gnats and small flying moths: apply using a food space sprayer adjusted to deliver a fine mist. Cover or remove exposed food and food handling surfaces. Close windows and doors and shut off ventilating systems. Direct spray toward upper portions of the enclosure filling the room with mist. Use 4 to 5 ounces per 1000 cubic feet of space. Keep area closed for at least 30 minutes. Vacate treated areas and ventilate before reoccupying. Repeat treatment as necessary.

OUTDOORS, ADULT MOSQUITO CONTROL

Apply as a fine mist to thoroughly treat the entire area. For best results, treat when the wind velocity does not exceed 5 miles per hour. Treat shrubbery and vegetation where mosquitoes may rest particularly around the perimeter of mosquito breeding sites such as swamps, marshes, stagnant pools and ponds. Apply at a rate of 5 to 6 quarts per acre (4ounces per 1000 square feet).

To control mosquito larvae, apply at the rate of 775 gallons per acre or 18 gallons per 1000 square feet. Apply as a coarse wetting spray to the border or on shallow waters of wetlands, swamps and marshes where mosquito larvae is known to breed.
