$$f_{\text{eff}}(p, q, r) = \frac{1}{2} [f_{\text{eff}}(p, q, r) + f_{\text{eff}}(q, p, r)] - \frac{1}{2} [f_{\text{eff}}(p, q, r) - f_{\text{eff}}(q, p, r)] \text{ at } (p, q, r) = (p, q, r) \text{ and } (p, q, r) = (q, p, r).$$

**KEEP OUT OF REACH OF CHILDREN
CAUTION**

1. The first part of the paper is devoted to the study of the properties of the function $f(x)$ defined by the equation

4. A further question is whether the above results are consistent with the hypothesis that the observed effects are due to the presence of a "critical mass" of individuals who are willing to act in a certain way. This hypothesis is supported by the results of the experiments, which show that the effects are more pronounced in groups of 10 than in groups of 5.

1. The first step in the process of the development of the program was the selection of the topic. The topic was selected on the basis of the results of the survey conducted in 1998. The results of the survey showed that the most common problem faced by the students was the lack of information about the program. The results of the survey also showed that the students were interested in the program. The results of the survey also showed that the students were interested in the program. The results of the survey also showed that the students were interested in the program.
