KEEP OUT OF REACH OF CHILDREN
DANGER:
 See other precautions and first aid on back panel.

DIRECTIONS FOR USE
 Tarry tablets are to be used as a disinfectant and
 algae control in pool water. They are long-lasting
 and are intended to slowly meter chlorine into pool
 water. In order to obtain its maximum effect, use
 as follows:
 1. Superchlorinate the pool water with one of
 Coastal's fast-acting, stabilized chlorines, follow-
 ing directions on the label for that product. Do not
 use the pool until the chlorine residual drops to
 2.0 ppm (parts per million).
 2. Adjust the cyanuric acid level in pool water to
 30 ppm (parts per million) with Coastal's Chlor-
 ine Stabilizer, following directions on the label for
 that product.
 3. Suggested daily dosage is one Tarry tablet per
 600 gallons of pool water into floating dispenser or
 top water skimmer. This dosage may vary in accor-
 dance with temperature, bather load, and amount of
 water flow. Using Coastal test kits as a guide, main-
 tain a 1.0 to 2.0 ppm free chlorine residual. During
 extreme heat or with heavy bather load, water
 should be checked every 2 hours. Tarry tablets
 should be checked every two hours. Tarry tablets
 will tend to lower pH of pool water. Maintain
 pH level of 7.2 to 7.6 for best results.
 One tablet weighs 1.6 oz. (42.3 grams). Tablet
 should not be thrown directly into pool. Not rec-
 ommended for waders or splashers pools.
