MOSQUITOES AND SMALL FLYING INSECTS OUTDOORS

Use 2% to 5% Malathion fog, aerosol or space spray. As a spray dilute 1 to 24 parts of water, fuel oil or diesel oil. When using kerosene type solvent as carrier, dilute 1 part of Malathion in 28 parts of a mixture consisting of 4 parts kerosene type solvent and 1 part aromatic hydrocarbon type solvent. For 5% dilute 1-10 using similar solvents. Repeat applications as necessary. Avoid applying oil-based formulations to valuable ornamental plants as injury may occur.

MOSQUITO LARVAE IN STANDING WATER

Apply at the rate of 15 fl. oz. (approximately 1/2 lb. actual Malathion) per acre. Mix in sufficient water or oil to obtain even coverage when applied by air or ground equipment.

INDOORS

Use a 2% Malathion liquid space and contact spray or a 2 1/2% Malathion low pressure spray bomb. A knockdown agent of a type commonly used in space sprays should be added to the spray.

Rooms should be thoroughly misted to envelop insects present and should be kept closed for 5 to 10 minutes. Sweep up and destroy fallen insects. Repeat applications as necessary. DO NOT contaminate food, dishes or utensils. DO NOT apply oil-based sprays directly to flowers or other ornamental plants in the home.
