

CLORE-TABS

DRY CHLORINATOR

TABLETS FOR SWIMMING POOLS

ACTIVE INGREDIENTS Calcium Hypochlorite 65%
INERT INGREDIENTS 35%
AVAILABLE CHLORINE 65%

DANGER:

EPA REG. NO. 1258-1N-1

Net Weight
50 Pounds (22.7 kg)

Sold By INORGANIC CHEMICALS DIVISION
PENNWALT CORPORATION • PHILADELPHIA, P.

DIRECTIONS FOR USE: It is a violation of federal law to use this product in a manner inconsistent with its labeling. Pennswim Chlor-Tabs for Swimming Pools, containing 85% available chlorine, are designed to dissolve slowly (up to 4 hours) and provide a steady source of available chlorine in swimming pools. Tablets control growth of algae and effectively kill many bacteria, thus helping to keep the pool in a sanitary condition. Four tablets weigh approximately 1 ounce. One standard U.S. measuring cup equals (approx.) 10 oz. of tablets.

READ THE PRECAUTIONARY STATEMENTS BEFORE USE.

INITIAL CHLORINATION: For initial chlorination of any pool water, add 1 oz. (4 tablets) for each 1,000 gallons. Allow 4 hours for the tablets to dissolve and then test the chlorine residual with pool test kit. If below 1.0 ppm (parts per million), repeat this dosage until 1.0 ppm is obtained. Pool should not be entered until chlorine residual reads 1.0-3.0 ppm.

MAINTENANCE: Subsequently, add 3-4 oz. of tablets per 5,000 gallons daily or as often as needed to maintain 1.0 ppm, whether the pool is in use or not. Use a test kit frequently to determine chlorine residual. If any chlorine residual is present, it is possible to increase the residual in pool water by 1.0 ppm by using 1 oz. of tablets per 5,000 gallons of water. For best results, use a dissolving basket, a floating container, or add the tablets to a plastic leaf strainer in the surface skimmer. Do not permit tablets to contact steel or plastic pool linings. Do not throw tablets directly into pool.

MAINTENANCE OF pH: pH should be maintained in the 7.2-7.6 range. Use any product available for this purpose; follow directions on the label. Maintaining 1.0 ppm chlorine residual and a 7.2-7.6 pH range will result in clean, sparkling water.

STABILIZED POOLS: If cyanuric acid is used to stabilize available chlorine, follow label directions for that product. Always maintain the chlorine residual at 1.0-1.5 ppm as determined by test kit. Add 3 oz. of tablets per 10,000 gallons every other day or as often as needed to maintain 1.0-1.5 ppm chlorine residual. To control algae during the pool season, superchlorinate every two weeks at the rate of 1 oz. of Chlor-Tabs per 1,000 gallons of water when the average afternoon temperature is below 80°F and once every week when the temperature is above 80°F. Pool should not be entered until chlorine residual reads 1.0-3.0 ppm.

SHOCK TREATMENT OR SUPERCHLORINATION: If algae develop, shock treat or superchlorinate the pool water by adding 1 oz. (4 tablets) for each 500 gallons of water. Allow 4 hours for the tablets to dissolve and repeat if necessary. Thoroughly clean pool by scrubbing surface of algae growth. Then vacuum and cycle through filter. Pool should not be entered until chlorine residual reads 1.0-3.0 ppm.
