

DIRECTIONS FOR USE

TOBACCO SOIL INSECT PROTECTION (Cutworms, Wireworms, White Grubs, June Beetle Larva)

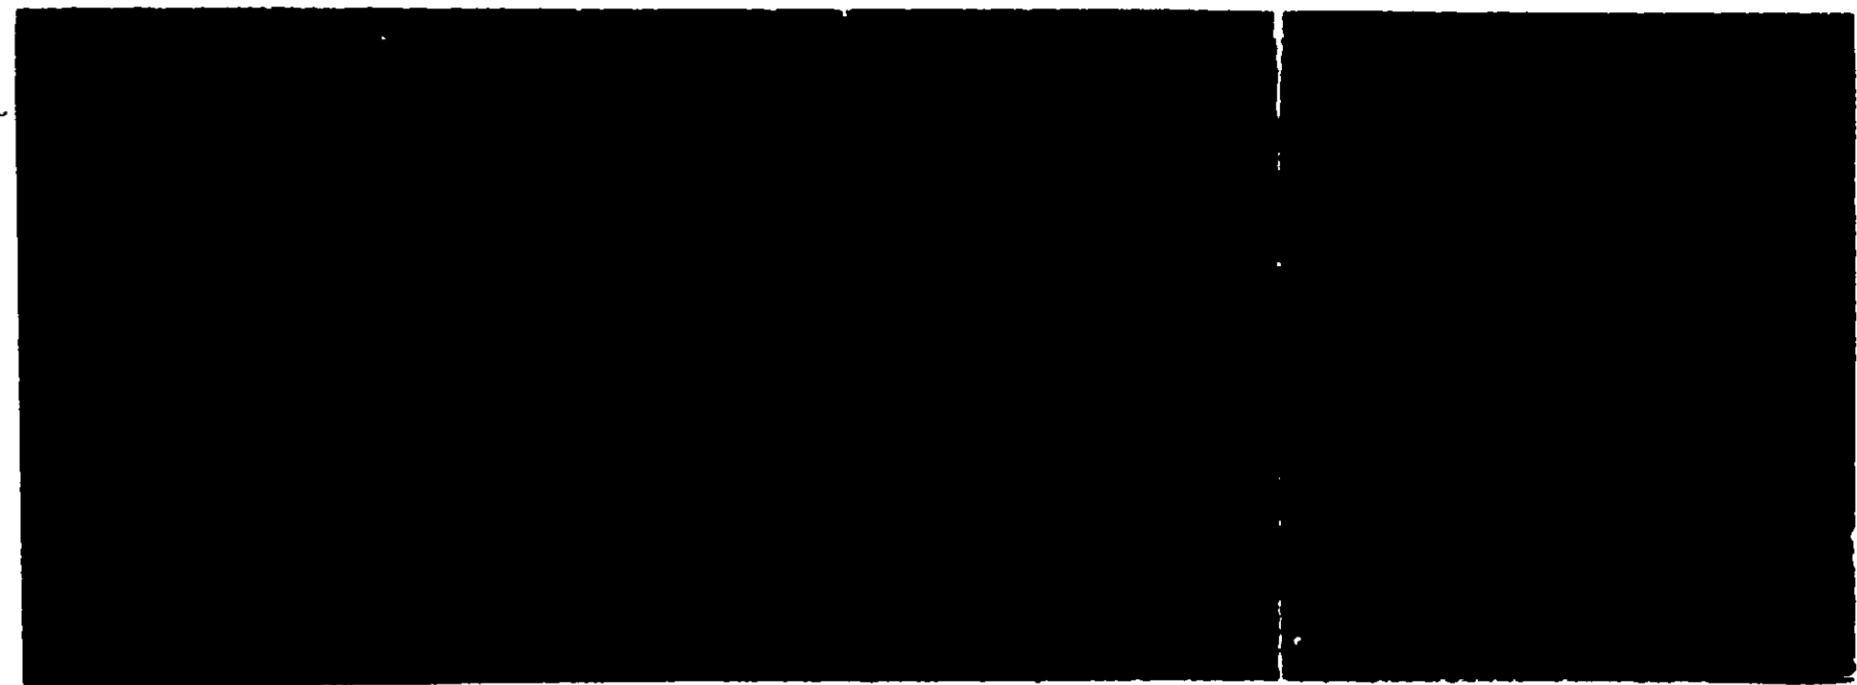

Gives you complete protection against the complex of soil insects that damage tobacco plants. Heptachlor's lasting action in the soil assures you of full season protection with one application.

Apply at the rate of 3 pounds actual heptachlor per acre (1 1/2 gallons) for best results. On areas not heavily infested, 2 pounds per acre (1 gallon) gives very good control.

For best results, apply 10 days to two weeks before setting tobacco. DISK INTO SOIL IMMEDIATELY AFTER APPLICATION.

DIRECTIONS FOR USE:

CORN SOIL INSECT CONTROL (Cutworms, Wireworms, Corn Rootworm, Seed Corn Maggot, Corn Field Ant)

Per pound of active ingredient, Heptachlor gives your corn more protection against soil insects. Strong, healthy roots develop. Ears fill out well. Standability is good, for safer, faster picking.

BROADCAST TREATMENT—Apply at 1 to 2 pounds actual heptachlor per acre. **DISK IN IMMEDIATELY.** The 2 pound rate will give two years protection against rootworms. The 1 pound rate will not give 100% control of all soil insects. 1 pound per acre gives excellent rootworm control.

ROW TREATMENT—Apply at 1/2 to 1 pound per acre with a spray nozzle directly behind the packing wheel. Adjust nozzle to spray into the soil as it falls into the furrow.

CAUTION: Do not breathe spray mist. May be fatal if swallowed. Do not contaminate feed and foodstuff. Keep out of reach of children. In case of contact with the concentrate, wash with soap and water.
