

DIRECTIONS FOR USE

Read All Directions and Cautions Before Using This Product.

DILUTION CHART

| Amount of Spray Mixture Desired | Amount of Chlordane 8# to Use | |
|---------------------------------|-------------------------------|-------------------|
| | 1% Solution | 2% Solution |
| 100 gallons | 1 gallon 8 ounces | 2 gallons 1 pint |
| 50 gallons | 2 quarts 4 ounces | 1 gallon 8 ounces |
| 25 gallons | 1 quart 2 ounces | 2 quarts 4 ounces |
| 5 gallons | 7 fluid ounces | 14 fluid ounces |
| 1 gallon | 1½ fluid ounces | 2¾ fluid ounces |

MIXING INSTRUCTIONS

Mix Chlordane 8 lb. Emulsifiable Concentrate with water by agitation; agitate the mixture while spraying. If allowed to stand, reagitrate before use. Chlordane emulsifies more easily in warm water than in extremely cold water.

HOUSEHOLD PESTS

Areas other than Food Handling Establishments. To control Cockroaches, Ants, Silverfish, Brown Dog Ticks, Crickets, Spiders, and Wasps, use a 2% solution of Chlordane 8# E. C. and apply per following directions.

Cockroaches, Silverfish, and Crickets: Make spot applications of a 2% Chlordane solution as a coarse wet spray or apply with a paint brush to baseboards, areas around water pipes, cracks and crevices, surfaces behind and beneath cabinets, refrigerators, sinks, stoves and similar areas where these insects hide. Repeat treatment as necessary to maintain control.

Ants and Spiders: Make spot applications of a 2% Chlordane solution around windows, doors, baseboards and other areas over which these insects may crawl. For ants, treat ant trails, runs and nests. Repeat as necessary to maintain control.

Brown Dog Ticks in Buildings: Make thorough application of a 2% Chlordane solution to infested areas around baseboards, window and door frames, wall cracks, sleeping quarters of household pets, and localized areas of floors, and floor coverings. Fresh bedding should be placed in animal quarters following treatment. Do not treat animals with this formulation.

Wasps: Application should be made in late evening when insects are at rest. Use a 2% Chlordane solution (Base oil is recommended instead of water for this application), thoroughly spray into hiding and breeding places, contacting as many insects as possible.

Food Handling Establishments

For control of **Cockroaches, Silverfish and Crickets**
Food Areas: Includes receiving, serving, storage (dry, cold, frozen, raw), packaging (canning, bottling, wrapping, boxing), preparing (cleaning, slicing, cooking, grind), edible waste storage, enclosed processing systems (mills, dairies, edible oils, syrups).
 All food-processing surfaces should be thoroughly cleaned before using. When using this product in these areas, apply only when plant is not in operation.

Use a 2% Chlordane solution and apply as a fine stream in small amounts to cracks and crevices where insects hide or through which they may enter the building. Includes expansion joints, spaces between equipment and floors, and openings leading to voids and hollow spaces in walls, equipment, legs and bases. Any material which may come into contact with areas outside of cracks and crevices must be completely cleaned up using soap and water followed by a thorough rinsing with potable water. Care should be taken to avoid introducing this material into the air.

Applications of this product in the food areas of food-handling establishments, other than as a crack and crevice treatment, are not permitted.

Non-Food Areas: Includes garbage rooms, lavatories, floor drains (to sewers), entries and vestibules, offices, locker rooms, machine rooms, boiler rooms, garages, mop closets, and storage (after canning or bottling).

Use a 2% Chlordane solution and apply as a coarse wet spray or with a paint brush to localized areas where these pests are found or normally occur, including dark corners of rooms and closets; cracks and crevices in walls; along and behind baseboards, beneath and behind sinks, lockers, tables, pallets, around plumbing and other utility installations where insects hide or through which they may enter.

LAWN AND ORNAMENTAL TURF PESTS

Ants and Earwigs: Apply at rate of ½ ounce Chlordane 8# E. C. in 5 gallons of water per 1000 sq. feet. For ants, special attention should be made to spot treat all ant hills. Spray a band of soil 5 feet wide around buildings as well as 2 - 3 feet high on foundation walls.

Chiggers, Sod Webworms, and Mole Crickets: Apply at rate of 1 ounce Chlordane 8# E. C. in 25 gallons of water per 1000 sq. feet.

White Grubs, Japanese Beetle Larvae, and White Fringed Beetle Larvae: Apply at rate of 4 oz. Chlordane 8# E. C. in 10 gallons of water per 1000 sq. feet.

Wireworms: Apply at rate of 2 oz. Chlordane 8# E. C. in 10 gallons of water per 1000 sq. feet.

CAUTION: Keep children and pets off treated areas until this material is washed into the soil and grass is thoroughly dry.

NOTE: Birds feeding over treated lawns may be killed.

| INSECT | Gals. 8 lb. Chlordane | Suff. Water for |
|-------------------------|-----------------------|-----------------|
| TERMITE | 1 gal. 8 oz. | 100 gals. |
| 1% Solution, Ratio 1:99 | 2 qts. 4 oz. | 50 gals. |
| Approx. | 1 qt. 2 oz. | 25 gals. |
| | 7 fl. oz. | 5 gals. |

TERMITE CONTROL

Specific Directions for Commercial Operators

Use a 1% emulsion for Chlordane 8 lb. E. C. as directed on dilution chart and apply at the following rate:

(A) BUILDINGS WITH CRAWL SPACES

- Apply 2 gals. per 5 linear ft. to critical areas only under the house, such as along the inside of foundation walls, around piers, sewer pipes, conduits, etc. Trench according to directions in (2) below.

Along the outside of foundation walls, dig a narrow trench, such trench to be dug no deeper than the top of the footings. If the trench is less than 15 inches in depth to the top of the footings, apply 1 gal. per 5 linear feet. Replace the soil and apply another 1 gal. per 5 linear feet to the backfill. Cover the backfill with a layer of soil. If the trench is more than 15 inches in depth to the top of the footings, apply 2 gals. per 5 linear feet. Replace soil and apply another 2 gals. per 5 linear feet to the back fill. Cover the backfill with a layer of soil. A trench 30 inches deep is a maximum

depth required alongside those foundations where the top of the footings is greater than 30 inches deep.

- Apply 1 gal per 10 sq. ft. of soil surface under attached porches, entrance platforms, utility entrances and similar situations where slab or fill is at the grade level. Where crawl spaces exist, treat as described in part (1) above.

(B) BUILDINGS WITH CONCRETE SLAB ON THE GROUND

- Apply 1 gal. per 10 sq. ft. as an overall treatment under the slab as well as under attached porches, entrance platforms, utility entrances, and similar situations where slab or fill is at grade level.
- Apply 2 gal. per 5 linear ft. to critical areas only under the slab such as along the inside of foundation walls, around sewer pipes, conduits, etc. Trench as in part (3) below.
- Along the outside of foundation walls, dig a narrow trench no deeper than 15 inches. Apply 1 gal. per 5 linear ft. Replace the soil and apply another 1 gal. per 5 linear ft. to the backfill. Cover the back fill with a layer of soil.

(C) BUILDINGS WITH BASEMENTS

- Apply 1 gal. per 10 sq. ft. as an over-all treatment under the basement flooring, as well as under attached porches, entrance platforms, utility entrances, and similar situations where slab fill is at the grade level. Where crawl spaces exist treat as described in (2) below.
- Apply 2 gals. per 5 linear ft. to critical areas only under the basement flooring, as well as porches and entrances having crawl spaces, such as along the inside of foundation walls, around sewer pipes, conduits, piers, etc.
- Trench and treat according to directions given in (A) (2) above.

Inspect treated building annually for possible reinfestation by termites.

DIRECTIONS FOR USE

DILUTION CHART

| Amount of Spray Mixture Desired | Amount of Chlordane 8# to Use | |
|---------------------------------|-------------------------------|--------------------|
| | 1% Solution | 2% Solution |
| 100 gallons | 1 gallon 8 ounces | 2 gallons 1 pint |
| 50 gallons | 2 quarts 4 ounces | 1 gallon 8 ounces |
| 25 gallons | 1 quart 2 ounces | 2 quarts 4 ounces |
| 5 gallons | 7 fluid ounces | 14 fluid ounces |
| 1 gallon | 1 1/2 fluid ounces | 2 1/2 fluid ounces |

MIXING INSTRUCTIONS

Always mix in a clean, drainable container with water by agitating with a long-handled sprayer. It is allowed to stand for 24 hours before use. Chlordane 8# is stable in water, but may be extremely cold water.

HOUSEHOLD PESTS

Areas other than Food Handling Establishments. For control of Cockroaches, Ants, Silverfish, Brown Dog Ticks, Fleas, Spiders, and Wasps, use a 1% solution of Chlordane 8# in water. Apply to the following areas:

Cockroaches, Silverfish, and Crickets. Make spot applications of 1% solution to areas where these insects are most likely to be found. Apply to cracks, crevices, and other hiding places. Repeat applications as necessary to maintain control.

Ants and Spiders. Make spot applications of 1% Chlordane solution to areas where these insects are most likely to be found. For ants, treat all trails. This material is necessary to maintain control.

Brown Dog Ticks in Buildings. Make thorough application of a 1% Chlordane solution to infested areas, including rooms, walls, window sills, and other areas. Sleeping quarters of houses, hotels, and boarding houses, and floors, walls, and furniture should be treated. Repeat applications as necessary to maintain control.

Wasps. Apply 1% solution of Chlordane 8# to areas where insects are most likely to be found. The application should be made during the evening hours, contacting as many insects as possible.

Food Handling Establishments

Elimination of Cockroaches, Silverfish, and Crickets

Food Areas: In areas where these insects are most likely to be found, apply 1% solution of Chlordane 8# in water to cracks, crevices, and other hiding places. Repeat applications as necessary to maintain control.

Non-Food Areas: Includes garbage rooms, janitor's closets, (to sewers), entries and vestibules, offices, locker rooms, boiler rooms, boiler rooms, washers, mop closets, and stairs (after running or bottling).

Use a 2% Chlordane solution and apply with a brush, spray or with a paint brush to areas where these insects are most likely to be found, including cracks, crevices, and other hiding places. Repeat applications as necessary to maintain control.

Cracks and Crevices: Apply 1% solution of Chlordane 8# in water to cracks and crevices. Repeat applications as necessary to maintain control.

Cracks and Crevices: Apply 1% solution of Chlordane 8# in water to cracks and crevices. Repeat applications as necessary to maintain control.

Cracks and Crevices: Apply 1% solution of Chlordane 8# in water to cracks and crevices. Repeat applications as necessary to maintain control.

Cracks and Crevices: Apply 1% solution of Chlordane 8# in water to cracks and crevices. Repeat applications as necessary to maintain control.

Cracks and Crevices: Apply 1% solution of Chlordane 8# in water to cracks and crevices. Repeat applications as necessary to maintain control.

| | 7 fl. oz. | 5 gals. |

TERMITE CONTROL

Specific Directions for Commercial Operators

Use a 1% emulsion for Chlordane 8 lb. E. C. as directed on dilution chart and apply at the following rates:

(A) BUILDINGS WITH CRAWL SPACES

1. Apply 2 gals. per 5 linear ft. to critical areas only under the house, such as along the inside of foundation walls, around piers, sewer pipes, conduits, etc. Trench according to directions in (2) below.

Along the outside of foundation wall, dig a narrow trench, 6 inches to 12 inches deep, to the top of the footing. If the trench is less than 15 inches in depth to the top of the footing, apply 1 gal. per 5 linear feet. Replace the soil and apply another 1 gal. per 5 linear feet to the backfill. Cover the backfill with a layer of soil. If the trench is more than 15 inches in depth to the top of the footings, apply 2 gals. per 5 linear feet. Replace the soil and apply another 2 gals. per 5 linear feet to the backfill. Cover the backfill with a layer of soil. A trench 39 inches deep is a maximum.

Apply 1 gal. per 10 sq. ft. as an overall treatment under the slab if the foundation is greater than 30 inches deep.

Apply 1 gal. per 10 sq. ft. as an overall treatment under the slab as well as under attached porches, entrance platforms, utility entrances, and similar situations where slab or fill is at grade level.

(B) BUILDINGS WITH CONCRETE SLAB ON THE GROUND

1. Apply 1 gal. per 10 sq. ft. as an overall treatment under the slab as well as under attached porches, entrance platforms, utility entrances, and similar situations where slab or fill is at grade level.
2. Apply 2 gal. per 5 linear ft. to critical areas only under the slab such as along the inside of foundation walls, around sewer pipes, conduits, etc. Trench as in part (3) below.

Along the outside of foundation wall, dig a narrow trench 6 inches deep, to the top of the footing. Apply 1 gal. per 5 linear ft. Replace the soil and apply another 1 gal. per 5 linear ft. to the backfill. Cover the backfill with a layer of soil.

(C) BUILDINGS WITH BASEMENTS

1. Apply 1 gal. per 10 sq. ft. as an overall treatment under the basement flooring, as well as under attached porches, entrance platforms, utility entrances, and similar situations where slab fill is at the grade level. Where crawl spaces exist, treat as described in (2) below.
2. Apply 2 gals. per 5 linear ft. to critical areas only under the basement flooring, as well as porches and entrances having crawl spaces, utility entrances, conduits, etc. foundation walls, and sewer pipes, conduits, piers, etc.

Along the outside of foundation wall, dig a narrow trench, 6 inches to 12 inches deep, to the top of the footing. If the trench is less than 15 inches in depth to the top of the footing, apply 1 gal. per 5 linear feet. Replace the soil and apply another 1 gal. per 5 linear feet to the backfill. Cover the backfill with a layer of soil. If the trench is more than 15 inches in depth to the top of the footings, apply 2 gals. per 5 linear feet. Replace the soil and apply another 2 gals. per 5 linear feet to the backfill. Cover the backfill with a layer of soil. A trench 39 inches deep is a maximum.
