

Cameraman's Note  
poor copy

Pyro Mill Spray is a finished insecticide, in ready to use form, for killing the exposed stages of certain insect pests of stored grain, stored food and food products. It may be used as a surface treatment or as a contact spray in standard or special equipment.

Pyro Mill Spray should be limited to use in processing plants where it can be applied to exposed surfaces which kills many insects without over them for extended periods of time.

#### DIRECTIONS

Pyro Mill Spray is applied to exposed surfaces which gives rapid control of certain stored food pests but requires a spray which kills many insects without over them for extended periods of time.

A

Pyro Mill Spray is a finished insecticide, in ready to use form, for killing the exposed stages of certain insect pests of stored grain, stored food and food products. It may be used as a surface treatment or as a contact spray in standard or special equipment.

As a surface application against gnats, wasps, hornets, etc., treat walls, ceiling, windows, doors, etc. at rate of 1/2 cup per square foot.

#### SPACE SPRAY

For rapid kill of flying and crawling stages of many common household pests, use Pyro Mill Spray. Whenever possible, close all doors and windows, turn off lights, tying pests off the floor, closing portions of the enclosure, turning off heat and using 2 to 4 cups per cubic foot of space. In unheated areas, sufficient time must be allowed to complete.

To kill active stages of certain pests, direct spray should be commonly applied to areas of liberally sprayed insects.

#### VAPOR SPRAY

Pyro Mill Spray may be used as a fog or vapor treatment. Steam may be used to help produce a more uniform spray. Direct spray to areas of infestation.
