

MOUSE-NIP

HOUSE MICE: Place one heaping teaspoonful of Mouse-Nip directly into the surface trails made by these mice and then pull grass back into place to form a covered "dining room." Make at least 3 placements in trails around each fruit tree.

FIELD MICE: (Meadow Mice) Place teaspoonful quantities directly into the surface trails made by these mice and then pull grass back into place to form a covered "dining room." Make at least 3 placements in trails around each fruit tree.

GOPHERS: Remove a soft earth plug from a newly formed mound with aid of a long handled spoon. Insert one heaping teaspoonful of Mouse-Nip seeds into the main underground tunnel. Close the lateral tunnel to the surface. The underground runway can also be located by probing about 4 inches out from the corner on the flat or concave side of the gopher mound. When located, enlarge the hole with a sharpened broomstick & drop heaping teaspoonful of Mouse-Nip seeds into tunnel beneath. Close probe hole with a clod or stone.

GROUND SQUIRRELS: Scatter one heaping teaspoonful of Mouse-Nip seeds on a spot on bare ground within a foot or two of each opening to the burrow. Small seed eating birds can be harmed by such placement.
