

HEDDY ROACH KILLER is a non-volatile inorganic borane designed for the control of cockroaches which inhabit the dark inaccessible areas of public buildings and residences. When judiciously applied into cracks and crevices which traditionally harbor cockroaches, HEDDY ROACH KILLER will afford extended protection against such universally unaccepted insects.

DIRECTIONS:

HEDDY ROACH KILLER is a unique insecticide. A white free-flowing powder, it is odorless, non-staining and non-volatile. The powder carries an electrostatic charge which causes it to adhere to vertical surfaces, making it ideal for dusting into building voids. Because of the static charge, HEDDY ROACH KILLER will adhere to the insect, causing intimate contact and kill. It acts slowly but continuously and when properly applied, will control the roach population within 7 to 10 days. Furthermore, because it is non-volatile, HEDDY ROACH KILLER will remain active and effective for long periods of time.

HEDDY ROACH KILLER is designed for use in homes, office buildings, hotels, apartment houses, restaurants, industrial plants, hospitals, warehouses and other areas susceptible to the roach invasion. When treating an area a bulb duster or bellows-type hand duster is recommended. HED-

DY ROACH KILLER should be dusted liberally into wall voids, soffit and sub-cabinet voids, under major appliances, under showers and tubs and into openings around drain and water pipes and electrical conduits.

HEDDY ROACH KILLER provides long lasting control. Should the roach population re-establish itself at a future date, simply reapply HEDDY ROACH KILLER as described in the above directions. Under any circumstances, an annual application is recommended.

NOTE: HEDDY ROACH KILLER is capable of destroying plant life and therefore should not be spilled or dumped into areas underlain with roots of valuable vegetation.

CAUTION: KEEP OUT OF REACH OF CHILDREN
Do not leave container where children or animals may take internally. When children are occupants of premises special precaution should be taken so that all residue will be out of reach of children. Dust only in areas not accessible to children and pets. Avoid contamination of food and foodstuffs. Do not leave container where children or animals may gain access.
