 <p>U.S. ENVIRONMENTAL PROTECTION AGENCY Office of Pesticide Programs Registration Division (7505P) 1200 Pennsylvania Ave., N.W. Washington, D.C. 20460</p>	EPA Reg. Number:	Date of Issuance:
	5042-35	AUG 23 2012
	Terms of Issuance: Unconditional	
NOTICE OF PESTICIDE: <input checked="" type="checkbox"/> Registration <input type="checkbox"/> Reregistration (under FIFRA, as amended)		RCO PATROL Burrow Builder Bait for MOLES & GOPHERS
Name and Address of Registrant (include ZIP Code): RCO International c/o Regulatory Services Inc. 17220 Westview Road Lake Oswego, OR 97034 Attention: Ms. Irene Boone		
<p>Note: Changes in labeling differing in substance from that accepted in connection with this registration must be submitted to and accepted by the Registration Division prior to use of the label in commerce. In any correspondence on this product always refer to the above EPA registration number.</p>		
<p>On the basis of information furnished by the registrant, the above named pesticide is hereby registered/reregistered under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA).</p> <p>Registration is in no way to be construed as an endorsement or recommendation of this product by the Agency. In order to protect health and the environment, the Administrator, on his motion, may at any time suspend or cancel the registration of a pesticide in accordance with the Act. The acceptance of any name in connection with the registration of a product under this Act is not to be construed as giving the registrant a right to exclusive use of the name or to its use if it has been covered by others.</p> <p>EPA received an application for this new registration on April 15, 2012. EPA grants this request under the authority of section 3(c)(5) of FIFRA, provided that you:</p>		
Signature of Approving Official:  John Hebert Product Manager (07) Insecticide-Rodenticide Branch Registration Division (7505P)		Date: AUG 23 2012

Notice of Registration (continued)
EPA Reg. No. 5042-35

- A. Submit and/or cite all data required for registration/reregistration of your product when the Agency requires all registrants of similar products to submit such data.
- B. Make the following label changes before you release the product for shipment:
 - 1. revise your registration number to "EPA Reg. No. 5042", and
 - 2. follow the "Minimum Type Sizes for Final Printed Label" enclosure.
- C. Submit the following data within 18 months from the date of this registration notice:
 - 1. Storage Stability (830.6317) and
 - 2. Corrosion Characteristics (830.6320).
- D. Per 40 CFR 156.10(a)(6), submit one copy of your final printed labeling before you release the product for shipment.

A copy of your label stamped "Accepted" is enclosed for your records.

Reference to Website on Label

Should you wish to add a reference to the company's website on your label, please be aware that the website becomes labeling under the Federal Insecticide Fungicide and Rodenticide Act and is subject to review by the Agency. If the website is false or misleading, the product would be misbranded and unlawful to sell or distribute under FIFRA section 12(a)(1)(E). 40 CFR 156.10(a)(5) list examples of statements EPA may consider false or misleading. In addition, **regardless of whether a website is referenced on your product's label**, claims made on the website may not substantially differ from those claims approved through the registration process. Therefore should the Agency find or if it is brought to our attention that a website contains false or misleading statements or claims substantially differing from the EPA approved registration, the website will be referred to the EPA's Office of Enforcement and Compliance Assurance.

Confidential Statement of Formula

The acceptable Confidential Statements of Formula (CSF) for this product are dated April 16, 2012 (Basic Formulation). All other versions are obsolete.

 - 2 Minimum Type Sizes for Final Printed Label

Note to Files

RCO PATROL Burrow Builder Bait for MOLES & GOPHERS
EPA File Symbol 5042-GL(35)

Reason for Requiring Storage Stability and Corrosion Characteristics Studies in Notice

RCO PATROL Burrow Builder Bait for MOLES & GOPHERS, EPA File Symbol 5042-GL, is a "RUP" version of RCO Mole & Gopher Patrol Bait, EPA Reg. No. 5042-33. The products have identical formulas, but the new product is packaged in larger sizes (10 to 50 lb ver ½ to 20 lb). Therefore, we would normally need no additional data.

However, we registered 5042-33 on February 22, 2007, with the condition that:

Within 15 months of receipt of this Notice of Registration, submit the results of Storage Stability (830.6317) and Corrosion Characteristics (830.6320) Studies.

After over 5 years (April 25, 2012), the Agency received only the Storage Stability (830.6317) study but no Corrosion Characteristics (830.6320) study in the submission for 5042-GL.

The company's agent had no explanation why the laboratory failed to run the second study, calling into question the validity of the study and competency of the registrant and laboratory, in my opinion. In every case that I am familiar, the two studies are run at the same time.

The storage stability study, which was inaccurately labeled an "accelerated" study, showed that after 12 months the amount of active fell below the lower certified limit.

Because of the irregularities outlined above, I have included the conditional requirements of Storage Stability (830.6317) and Corrosion Characteristics (830.6320) Studies in the Notice of Registration.

Dan Peacock, Biologist
Insecticide-Rodenticide Branch

RESTRICTED USE PESTICIDE
DUE TO HAZARD TO NONTARGET SPECIES
 For retail sale to, and use only by, Certified Applicators or persons under their direct supervision and only for those uses covered by the Certified Applicator's Certification.

RCO PATROL Burrow Builder Bait for MOLES & GOPHERS

This bait product may only be used to control Moles and Pocket Gophers in manual and mechanical below-ground applications only.

ACTIVE INGREDIENT: Diphacinone..... 0.005%
 INERT INGREDIENT:.....99.995%
 TOTAL100.000%

KEEP OUT OF REACH OF CHILDREN
CAUTION **ACCEPTED** **AUG 23 2012**
 See back panel for additional precautionary statements.

RCO INTERNATIONAL INC.
P.O. Box 191, Harrisburg, OR 97446

**Under the Federal Insecticide, Fungicide,
and Rodenticide Act, as amended, for the
pesticide registered under:**

EPA REG. NO. 5042- EPA EST. NO. ~~EPA Reg. No. 2~~ 5042-35

NET WEIGHT: 10 LB., 30 LB., & 50 LB.

PRECAUTIONARY STATEMENTS

Hazards to Humans and Domestic Animals

CAUTION: Harmful if swallowed or absorbed through the skin. Causes moderate eye irritation. Avoid contact with eyes, skin, or clothing. Keep away from children, domestic animals and pets.

Personal Protective Equipment (PPE):

All handlers (including applicators) must wear long-sleeved shirt, long pants, shoes, socks and waterproof gloves. Any person who retrieves carcasses or unused bait following application of this product must wear waterproof gloves.

User Safety Requirements

Follow manufacturer's instruction for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry. Remove PPE immediately after handling this product. Wash the outside of gloves before removing. As soon as possible, wash hands thoroughly after applying bait and before eating, drinking, chewing gum, using tobacco or using the toilet and change into clean clothing.

FIRST AID

Have label with you when obtaining treatment advice.

If swallowed	<ul style="list-style-type: none"> • Call poison control center, doctor, or 1-800-222-1222 immediately for treatment advice. • Have person sip a glass of water if able to swallow. • Do not induce vomiting unless told to do so by the poison control center or doctor.
--------------	--

If on skin or clothing	<ul style="list-style-type: none"> • Take off contaminated clothing. • Rinse skin immediately with plenty of water for 15-20 minutes. • Call a poison control center, doctor, or 1-800-222-1222 immediately for treatment advice.
------------------------	--

If in eyes	<ul style="list-style-type: none"> • Hold eye open and rinse slowly and gently with water for 15-20 minutes. • Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. • Call a poison control center, doctor, or 1-800-222-1222 immediately for treatment advice.
------------	--

TREATMENT FOR PET POISONING

If animal eats bait call veterinarian at once

NOTE TO PHYSICIAN OR VETERINARIAN

Anticoagulant Diphacimone If swallowed this material may reduce the clotting ability of the blood and cause bleeding **For humans or dogs** that have ingested this product and/or have obvious poisoning symptoms (bleeding or prolonged prothrombin times) give Vitamin K₁ intramuscularly or orally

Environmental Hazards

This product is extremely toxic to fish birds and other wildlife Dogs and other predatory and scavenging mammals and birds might be poisoned if they feed upon animals that have eaten this bait Do not apply directly to water to areas where surface water is present or to intertidal areas below the mean high water mark Do not contaminate water when disposing of equipment washwater or rinsate

ENDANGERED SPECIES CONSIDERATIONS

Notice The use of this product may pose a hazard to Federally designated endangered/threatened species It is a Federal offense to use any pesticide in a manner that results in the death of a member of an endangered species Consult the nearest U S Fish and Wildlife Service regional office or the appropriate State Agency for current information on habitats occupied by endangered species

Black footed Ferret (*Mustela nigripes*)

Do not use this product within prairie dog towns within the range of the black footed ferret without first contacting endangered species specialists U S Fish and Wildlife Service Denver Regional Office

San Joaquin Kit Fox

Do not use this pesticide within one mile of active dens of the San Joaquin Kit Fox in the following California counties Fresno Kern Kings Merced Monterey San Benito Santa Barbara San Luis Obispo Tulare and Ventura

Prior to use contact endangered species specialists at the California Department of Fish and Game or the U S Fish and Wildlife Service Portland Regional Office for recommendations To review endangered species within your state and county log on to www.fws.gov at the top of the page use the drop down menu to select your region then select endangered species or ecological services (dependent on the region) next search for the listed species by state or county review list of endangered species for that area

STORAGE AND DISPOSAL

Do not contaminate water food or feed by storage or disposal

Pesticide Storage Store only in original container in a cool dry place inaccessible to children and pets Keep containers closed and away from other chemicals

Pesticide Disposal Wastes resulting from the use of this product may be placed in trash or delivered to an approved waste disposal facility

Container Handling Nonrefillable container Do not reuse or refill this container

[Plastic] Offer for recycling or reconditioning or puncture and dispose of in a sanitary landfill or by incineration

[Paper] Dispose of empty container by placing in trash at an approved waste disposal facility or by incineration

DIRECTIONS FOR USE

It is a violation of Federal law to use this product in a manner inconsistent with its labeling

Read This Label

Read this entire label and follow all use directions and use precautions **Apply this product only for the sites, pests and application methods specified on this label**

IMPORTANT Do not expose children pets and other non target animals to rodenticides

To help prevent accidents

- 1 Store product not in use in locations out of reach of children pets and other animals
- 2 Apply bait in locations out of the reach of children pets domestic animals and non target wildlife
- 3 Dispose of product container unused spoiled and unconsumed bait as specified on the label

Use Restrictions This product is only for the control of Eastern Moles (Scalopus aquaticus) in lawns golf courses and sod farms and to control Pocket Gophers (Geomys spp and Thomomys spp) in and bordering crops (alfalfa forage grass hay mixed grass/hay stands vegetables and cereal grains) rangeland fruit orchards tree nut orchards and citrus orchards and non crop areas (forestry plantations lawns golf courses sod farms levee/ditch banks nurseries parks and around agricultural buildings) Do not place bait in areas where there is a possibility of contaminating food or surfaces that come in direct contact with food Do not apply bait above ground Remove or bury any bait spilled on the ground during application Follow separate application directions on this label for moles and gophers

DIFFERENCES between MOLES and GOPHERS

Moles are insectivores whose diet is primarily worms and soft bodied insects They put up large mounds that are conical and very cloddy Certain mole species will leave

“ridged” runways near the soil surface. Gophers are vegetarians and prefer succulent plant roots. They put up random low fan-shaped mounds of finely excavated soil. Moles and gophers can be active year round.

MANUAL APPLICATION DIRECTIONS FOR MOLES

SUBSURFACE RUNWAYS: Subsurface runways are detected as raised ridges of vegetation and soil caused by moles foraging just below the soil surface. These ridges are especially noticeable when the grass on top of them yellows.

As many subsurface runways are used only once, you must determine which runways are habitually used by moles and apply bait only to these runways. To check subsurface runways for continued activity gently flatten short sections of runways, marking locations where runways have been flattened so that you will know where to look for reconstruction of the ridge. Flagging on short stakes or dowels works well for this purpose, but make sure these are located beside (rather than in) the runways marked. Runways that are reconstructed within 72 hours of flattening may be sufficiently active to use for baiting.

Apply bait to each active runway identified. Using a 1/2-inch diameter dowel or metal rod (or other suitable implement) make a small opening in the top of the runway. Deposit a teaspoon quantity (about 4 grams) of bait through the hole, taking care not to collapse the ridge of the runway. (Move to a new location if ridge collapses). Carefully re-close the hole so that extra light is excluded, but no soil falls on bait and ridge is not collapsed. A small piece of sod or wadded paper towel may be used to reclose holes. Bait each active subsurface runway at 10- to 15-foot intervals. Check treated area often for signs of continued activity by moles. Re-treat areas where fresh activity is seen.

CONICAL MOUNDS and DEEP TUNNELS:

Moles also may construct deeper tunnel systems, 4-6 inches below the ground surface. Such deeper tunnel systems are betrayed by the presence of conical mounds, sometimes 4-12 inches high, which are formed when moles push excavated soil up to the surface. Adjacent conical mounds often are only a few feet apart. The tunnel running between adjacent mounds may be found by probing the soil between mounds. Resistance on the probe decreases abruptly once the tunnel is entered.

To bait deeper tunnels, probe until a tunnel is located. Enlarge the probe hole as needed to accommodate the passage of bait. Apply a teaspoon amount (about 4 grams) of bait into the tunnel. Cover the probe hole with sod, a small rock, or wadded paper to Take care not to allow soil to cover bait. Treat each apparent length of deep tunnel. Several days after treatment, check deep tunnels for continued presence of moles by probing openings into tunnels and marking them with flagged stakes inserted into the soil beside the opening. Re-treat all deep tunnels whose openings are reclosed from within during the next 72 hours.

MECHANICAL BURROW BUILDER APPLICATION DIRECTIONS FOR MOLES

For us in machine applicators using burrow building equipment. Adhere to the manufacturer’s instructions for the equipment used to apply this bait. Construct artificial

burrows at the natural tunnel depth of the Mole, spaced about 20-30 apart. Apply at the rate of 6-8 lbs. per acre. Apply only when soil conditions allow for the formation of good artificial tunnels. Check tunnel quality after test run with burrow builder. Collect and dispose of spilled bait according to this label.

MANUAL APPLICATION DIRECTIONS FOR GOPHERS

Pocket Gophers form many low, fan-shaped mounds from their below excavations. Their entrance is on the mound's edge that is usually plugged. A short below-ground lateral tunnel connects the mound to the main runway, typically within 18" of the mound. To locate the main tunnel, probe the soil about 6-8" out from the mound in a circular pattern with a rod-like device. The probe will "give way" as the tunnel is penetrated. Remove probe after enlarging the opening by using rod in circular motion. ground tunnel

APPLICATION: Method 1: Apply 1/2 cup of bait down the enlarged hole. Carefully close hole with sod or similar material to prevent light from entering and also to keep soil debris from falling down on bait. Make 2-3 applications per active burrow system. Re-treat if fresh mounds appear after 2 to 3 weeks. Method 2: Enlarge located tunnel to allow for placement of bait using a long handled spoon. Apply 1/4 cup of bait in both directions down tunnel. Close baiting hole as directed above. Also, treat in 2-3 locations per tunnel system. Repeat as recommended above if fresh mounds appear. Method 3:-Bait Station Use: Utilize an approved below ground bait station by burying unit into an active tunnel system. Align bait station openings with tunnel runways. Load 1 lb. of bait into buried station and monitor bait consumption. Add bait to station as necessary. Always bait in the main tunnel system, not laterals (see below Diagram). Monitor the baiting stations for tunnel rebuilding that may bury the placed bait. Re-bait in other sites within the same tunnel system.

Manual Bait Placement Diagram for Gophers:

4/11

**MECHANICAL BURROW BUILDER APPLICATION DIRECTIONS FOR
GOPHERS**

For use in machine applicators using burrow building equipment. Adhere to the manufacturer's instructions for the equipment used to apply this bait. Construct artificial burrows at the natural tunnel depth of the Gopher, spaced about 20-30 apart. Apply at the rate of 6-8 lbs. per acre. Apply only when soil conditions allow for the formation of good artificial tunnels. Check tunnel quality after test run with burrow builder. Collect and dispose of spilled bait according to this label.
