M-40 ALGAEICIDE

APPLICATION: UOP M-40 is used to control algae, bacteria and fungi in circulating commercial and industrial water cooling towers. Prior to its use, systems must be cleaned to remove algal growth, microbiological slime and other deposits. An initial slug addition of 2.9 to 7.3 fl. oz. of UOP M-40 Algaecide per 1000 gallons of water to provide a concentration of 24 to 60 p.p.m. of UOP M-40 Algaecide based on the total weight of water in the system is recommended. Subsequent slug additions of 2.9 to 7.3 fl. oz. of UOP M-40 Algaecide per 1000 gallons of water (2.9 to 60 p.p.m. of product) should be employed every 2 to 4 weeks as needed. The frequency of addition depends upon the seasonal amount of the growth and the severity of the microbiological problem. The addition of UOP M-40 Algaecide to the circulating water should be made at a rate of 2.9 to 7.3 fl. oz. per 1000 gallons of water (24 to 60 p.p.m. of product).
