

2-CH ALGAECIDE

APPLICATION. UOP 2 CH Algaecide is used to control algae in recirculating commercial and industrial water cooling towers. Badly fouled systems must be cleaned before treatment is begun. An initial slug addition of 8.3 to 12.4 oz. AV of this product per 1000 gallons of water (18-27 ppm of active ingredient) is recommended. Repeat until control is achieved. Subsequent slug additions of 3.1 to 5.2 oz. AV of UOP 2-CH per 1000 gallons of water (6.75-11.25 ppm of active ingredient) should be employed every 2 to 5 days or as needed. The frequency of addition depends on the relative amount of bleedoff and the severity of the microbiological problem. Additions should be made in an area of good circulation to assure proper mixing.

Begin treatment when the system is in jeopardy of becoming affected or after cleaning systems whose efficiency is already impaired. EPA Reg No. 5135-21.
