

AC 1000

DIRECTIONS FOR USE

Initial Dose: 1 gallon Horning's Pool Algaecide to 50,000 gallons of water.

Maintenance Dose: 1 quart Horning's Pool Algaecide to 50,000 gallons of water.

Initial dose is used when filling pool at beginning of swimming season. If pool has visible algae growth, treat with initial dose. Vacuum pool after 24 hours to remove algae debris. If visible algae are still present or re-appear, repeat this treatment procedure as necessary. When pool is free of visible algae, use the recommended maintenance dose.

Maintenance dose should be added at 3-5 day intervals. If high temperatures prevail or pool has unusually heavy use, add maintenance dose more frequently.

If make-up water is added at the rate of more than 10% per week of the capacity, add 1 quart of Horning's Pool Algaecide for each 10,000 gallons of make-up water added per week.

When swimming pool is used, never add 1 quart of product to less than 50,000 gallons of water in treating water. This treatment provides the rate of control for a pool and may be repeated as necessary. The treatment should be applied to the entire pool before it is returned to use. The following are some

FISH AND OR WILDLIFE PRECAUTIONS

This product is toxic to fish. Do not use in ponds, streams, rivers, lakes, or public waters. Apply this product only to swimming pools and spas.

Do not use in any other water body with fish or wildlife.

Under the
Federal
Insecticide, Fungicide,
and Rodenticide Act
registered under
