AGRI-FRESH[®]
FUNGICIDE # 526

FOR THE POST HARVEST TREATMENT OF PEARS AND APPLES

E.P.A. Reg. No. 5202-6

Treating Apples and Pears for the control of rots caused by blue and green molds.

1. In immersion type bin dumpers the tank should be charged with 0.3% Sodium orthophenylphenate Tetrahydrate. Use one U.S. gallon of Agri-Fresh to each 99 gallons of water needed to change the tank. This provides for 0.3% Sodium orthophenylphenate Tetrahydrate. When the tank level drops during operation, add one gallon of Agri-Fresh to each 99 gallons of makeup water added.

2. When Brogdex FoameX containing 2.0% Sodium orthophenylphenate Tetrahydrate (S.O.P.P. Tetrahydrate) is used for washing the fruit after the immersion dump, the concentration of S.O.P.P. Tetrahydrate should be reduced to 0.15% in the dump tank. Use one gallon of Agri-Fresh for each 199 gallons of water necessary to charge the tank.

The fruit should be immersed in Agri-Fresh for a minimum of two minutes and the fruit must be rinsed with fresh water after treatment.

Active Ingredient Sodium Ortho Phenylphenate, Anhydrous	21.83%
Inert Ingredients:	78.17%

CAUTION:
KEEP OUT OF REACH OF CHILDREN!

CORROSIVE LIQUID. Avoid contact with skin, eyes, or clothing. For eyes, flush with water for 15 minutes and get medical attention.
