Manufactured By
MURPHY PRODUCTS COMPANY, INC.
 Burlington, Wisconsin

Plants at Burlington, Wis. and Sioux City, Iowa

FEEDING DIRECTIONS

CATTLE

Hand-feed 1 4 oz. per 100 lbs. body weight daily while cattle are on pasture or in dry lot. If mixing is desired, Murphy W-R-Min can be mixed into the regular daily ration.

Murphy W-R-Min is formulated so that each 1 oz. contains 1 gram of phenothiazine. An 800 lb. animal should consume 2 oz. daily for proper intake of phenothiazine.

FOR SHEEP - Free choice or hand feed at the rate of 1 oz. per head per day (one pound per 16 head).

FOR HORSES - Free choice or hand feed at the rate of 2 oz. per head per day for 21 days of each month, then none for the other 9 days.

CAUTION:

1. No other mineral or salt should be offered while feeding Murphy W-R-Min.
2. For maximum protection against horn flies, spray cattle before starting on this continuous low level phenothiazine program. Murphy W-R-Min prevents the breeding of horn and face flies in the manure but does not affect any existing adult flies.

WARNING:

1. Do not feed to lactating dairy animals.
2. Occasional sensitivity to phenothiazine has been reported in cattle.
