FORMULA NO. 655

Our Formula No. 655 Fungicidal Enamel is the result of our chemists' years of experience in the paint industry and is recognized as the finest enamel obtainable.

USES

This ENAMEL is formulated for application on interior surfaces of wood, metal, concrete, brick or plaster where the desire is to promote sanitation and to help eliminate mold and mildew.

DIRECTIONS

This ENAMEL is ready for use, but if it is to be applied in rooms of low temperature the container should be immersed in hot water to aid brushability. Do not add oil of any kind. Allow 24 hours drying time between each coat.

Both unfinished and previously painted surfaces should be free of all foreign and loose particles. Where mold infection now exists remove the mold with wire brush. When a grease like condition exists wash the infected area with a strong solution of tri-sodium phosphate. Rinse and allow surface to rid itself of free water. For best results one coat of Fungicidal Clear Sealer (Formula 645) should be applied as an undercoat.

Do not mix our ENAMEL with any other paint or varnish since it has been formulated to be of the highest quality possible. It can, however, be tinted to pastel shades with oil colors.

NOTICE: If too heavy thin with Mineral Spirits.

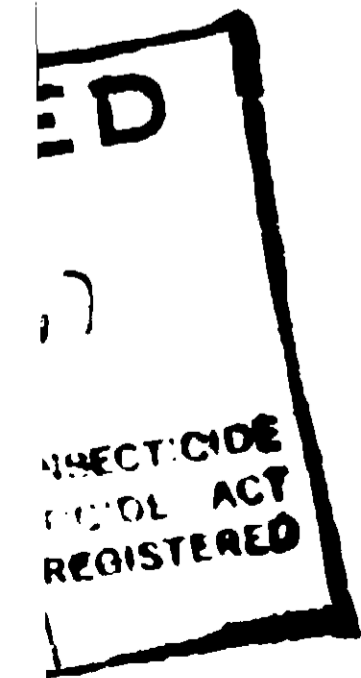

CAUTION! COMBUSTIBLE!

Keep away from heat and open flame. Avoid prolonged contact with skin and breathing of vapor or spray mist. Not for painting surfaces in direct contact with food. Close can when not in use.
