

HOUSE PLANT & GARDEN PRODUCTS

GENERAL DESCRIPTION:

PHOSFON is recommended as a height-retardant for all garden or hardy chrysanthemums. Now you can grow the large, tall-growing, decorative types of garden chrysanthemums including quill, spider and anemone as shorter, compact and therefore more attractive and desirable plants. PHOSFON treated plants have stronger stems, resist breaking due to bloom load, and do not sprawl as do untreated plants.

The compact growth of cushion and button types of mums are further enhanced by treatment with PHOSFON.

PHOSFON does not produce phytotoxicity or affect the size or quality of blooms when used at the recommended rate. Some varieties show a delay in blooming.

DIRECTIONS FOR USE:

Remove one quart of soil from the location where the rooted chrysanthemum plant is to be planted. (A hole 5 inches in diameter and 3 inches deep will give one quart.) Place soil in a suitable container. Sprinkle one-half teaspoon of PHOSFON over the soil. Using a trowel, thoroughly and uniformly mix the PHOSFON with the soil. Replace soil in the hole and plant rooted cutting in the center of treated area. Follow your normal schedule of watering, fertilizing and plant care.

NOTE: Do not exceed recommended rate of application.

KEEP PHOSFON BAG TIGHTLY CLOSED WHEN NOT IN USE

ACTIVE INGREDIENT: Tributyl-2,4-dichlorobenzylphosphonium chloride *1%
INERT INGREDIENTS: 99%

CAUTION:

Do not breathe dust. Avoid contact with skin, eyes and clothing. Wash hands thoroughly with soap and water after using. Do not contaminate feed and foodstuffs. Keep away from children and domesticated animals.
