MARINE FINISHES COPPER BRONZE

One Quart U.S. Measure

DIRECTIONS

A very effective yacht and racing bottom paint. Its smooth, hard finish is designed to minimize friction. MARINE FINISHES COPPER BRONZE is highly recommended for application on the bottom or contact side of wooden water skis.

PREPARATION OF SURFACE: The surface should be dry, clean, smooth and free of grease and oil. Thoroughly remove all loose paint and other foreign substances by scraping and sanding. Where finish is in poor condition, use paint and varnish remover. Metal surfaces must be primed with Metal Primer.

APPLICATION: Remove can cover, carefully lift out the upper compartment containing the powdered copper paste and stir this paste into the vehicle until thoroughly dispersed. Stir occasionally during the application of the paint. Do not add any other oil, varnish or paint. Do not add paint thinner unless the paint becomes too thick and then not more, and preferably less, than 1/2 pint of V-THINNER per gallon. On previously painted surfaces in good repaintable condition, only two coats are required. On new work and on surfaces from which all paint has been removed, three coats are necessary.

DRYING TIME: Allow eight hours drying between coats and before launching.
