**DIRECTIONS FOR USE — FOR BEST RESULTS,
FOLLOW DIRECTIONS CAREFULLY**

FOR ROACHES: Spray infested areas around refrigerators, sinks, stoves, kitchen cabinets, baseboards, areas around water and drain pipes, in cracks and crevices, and similar areas where these insects hide, providing the areas are not readily accessible to children. Application should be made with a coarse spray or with a paint brush. Repeat application as often as necessary.

HOUSEFLIES, WASPS AND MOSQUITOES: For outdoor use only as an aid in reducing annoyance from these insects. Spray outside surfaces of screens, doors, window frames and wherever these insects may enter the room. Also, treat surfaces around light fixtures or porches, in garages, or other places where these insects alight or congregate. Repeat as often as necessary.

FOR ANTS: Apply the spray to runways and areas they visit, providing the areas are not readily accessible to children, wetting as many of the insects as possible. Spray, with a coarse spray or with a brush, the baseboards, pantry shelves, and all cracks and crevices opening to the outside of the house. Repeat treatment as often as necessary.

CARPET BEETLES: Make localized application to infested areas of carpet and to the floor and baseboards. Apply a coarse spray into cracks and crevices and under carpets where these insects may be found. Treat closets and infested areas of shelving. Repeat application as often as necessary.
