

# PYRETHIONE

## AN IMMEDIATE AND RESIDUAL INSECTICIDE

A potent, effective insecticide combining the quick action of Pyrethrin with the residual action of Malathion and Rotenone. It is effective against fleas, lice, ticks and mosquitoes and retains the residual activity for 10 days to two weeks.

### DIRECTIONS:

**FOR USE ON DOGS AND CATS:** Dilute one pint PYRETHIONE by adding 7 pints water and mix thoroughly. Wet the animal and apply PYRETHIONE uniformly over coat. Allow five minutes for action before using. For residual effects, leave the product in the coat. May be added to shampoo if desired, but this will prevent any residual action.

**FOR USE ON CAGES, ETC.:** The diluted emulsion may be used as a spray, either on the animal itself or on cages, blankets, runs. If separation occurs in the diluted product, shake well before using.

### CAUTION: KEEP OUT OF REACH OF CHILDREN

Persons using the diluted product daily are advised to wear rubber gloves to avoid repeated absorption through the skin. This concentration should be handled carefully. Wash off the skin immediately. Harmful if swallowed. Avoid prolonged breathing of spray mist. Avoid contamination of feed and foodstuffs. Do not apply more often than once weekly.
