

KERB GRANULES 1

ACTIVE INGREDIENT:

3,5-dichloro -N- (1,1-dimethyl-2-propynyl) Benzamide 1.0%

INERT INGREDIENTS: 99.0%

KERB is a selective herbicide that is especially effective for the pre- and post-emergence control of annual bluegrass (Poa annual) in ornamental bermudagrass. Dichondra, bluegrass, annual and perennial ryegrasses, fescues and bentgrass are sensitive to pre-emergence and post-emergence applications of KERB.

DIRECTIONS: KERB acts through root absorption, so application should be followed within 1 or 2 days by rainfall or light overhead irrigation to move the chemical to the root zone. Avoid heavy irrigation of more than 1 inch to reduce the possibility of excess washing or leaching of the chemical from the area of application. Care should be taken to avoid treating areas on fairways or approaches that may drain onto bentgrass greens or to areas that have been overseeded with sensitive cool season grasses.

Bermudagrass golf courses, lawns and playing fields—for pre-emergence and early post-emergence control of Poa annua, use 50 to 100 lbs. per acre. Apply in the fall or late winter when Poa annua normally begins to germinate or is in the one or two leaf stage. Use the higher rate where longer residual control is desired. For post-emergence control of Poa annua in the early tillering to heading stage use 75 to 100 lbs. per acre. For Poa annua in seed forming stages use 100 to 150 lbs. per acre.

Do Not overseed with susceptible cool season grasses within 90 days of treatment.

CAUTION: Keep Out Of Reach Of Children.

Harmful if swallowed. Avoid skin and eye contact. In case of skin contact wash with soap and water. In case of eye contact, wash with copious quantities of water. DO NOT breath the dust. Apply as specified on this label. DO NOT reuse empty container. Bury empty containers and clean equipment in non-croplands away from water supplies. Do not contaminate water by cleaning of equipment, or disposal of wastes.
