

OTHER TERMITE CONTROL PRODUCTS

TERMITE BARRIER SOLUTION TBS-25 — For soil treatment to stop sub-terranean termites. One gallon makes 25-50 gallons solution when mixed with water. May also be used to control Dry-Wood Termites and other wood destroying insects in un-painted wood by diluting with 12 parts kerosene and applying liberally to all infested areas or to all surfaces to be protected from infestation.

PENTA-KLOR WOOD TREATMENT — To be mixed with 5 to 10 parts solvent to provide a low cost material to treat unfinished wood for control of both wood boring insects and fungus. Cost of finished material less than \$1.00 per gallon.

CAUTION

Use in a well ventilated room or in the open. Contact with skin can cause toxic symptoms. May be absorbed through the skin. Avoid breathing mist. Avoid contact with eyes, skin or clothing. In case of spillage on skin, wash immediately with soap and water. Avoid contamination of food and foodstuffs. Harmful if swallowed. Do not use on household pets or humans. Do not use on hot surfaces or open flame. Some asphalt tile, linoleum, and plastic materials are harmed by petroleum based insecticides. If in doubt cover with newspapers before spraying.

CHILDREN - Do not use in areas where children play.

HOW TO USE

TERMITE SPRAY C-98 is formulated for control of Dry-Wood Termites especially in wood surfaces that have been painted or varnished. It has excellent penetrating properties and vaporized into a gas which is deadly to termites and other wood destroying insects. It also leaves a toxic residue in the wood to protect from further infestation. TERMITE SPRAY C-98 will not harm seasoned painted or varnished surfaces. Dry-Wood Termites indicate their presence in two ways — by discharging fecal pellets (waste matter) and swarming from their galleries in the wood.

Apply TERMITE SPRAY C-98 to infested areas or areas to be protected against infestation with brush or coarse, wet spray and make repeated applications as the chemical is absorbed. If possible locate the exit holes to the Termite galleries and enlarge it with a needle or ice pick. Inject TERMITE SPRAY C-98 into the hole with a pressure oil can, hypodermic syringe or other available means.

If possible remove object to be treated outdoors or use in a well ventilated room. Leave area closed up for several hours or until the wood has thoroughly absorbed the chemical.

Dry-Wood Termites swarm during late April through August and infest new areas. They can enter buildings through window screens, attic ventilators and other openings. Entrance through window screens can be prevented by applying our AMPEX Household Insecticide to the screens with brush, roller or screen painter.

One gallon will cover from 100 to 200 square feet.
