GRO-WELL TREE WOUND PAINT

GRO-WELL TREE WOUND PAINT is a fast-acting, long-lasting, and effective treatment for tree wounds. It is designed to seal the wound, prevent decay, and promote the natural healing process of the tree.

**PREPARATION:** The paint should be applied to a clean, dry surface. The surface should be prepared by removing any loose bark or debris. The paint is applied with a brush or applicator.

**APPLICATION:** The paint is applied in a thick, uniform layer over the wound. It should be applied to the entire surface of the wound, including the edges. The paint should be applied to the wound as soon as it is made.

**REPAIR:** The paint will seal the wound and prevent decay. It will also promote the natural healing process of the tree. The paint will last for several years.

**SECOND WOUND PAINT:** If a second wound occurs, the paint should be applied to the new wound. The paint will seal the wound and prevent decay. It will also promote the natural healing process of the tree.

**SHARPING CUTTERS:** The paint should be applied to the wound as soon as it is made. The paint will seal the wound and prevent decay. It will also promote the natural healing process of the tree.
