MIXING INSTRUCTIONS

Mix thoroughly, one part of Prolin with 19 parts of a suitable bait material which is available such as corn meal, rolled oats, dog food, laying mash, etc. A small amount of a bland oil such as mineral, corn, peanut or any edible oil may be used, up to 5%, when the bait is so dry that it might have a tendency to dust.

**DIRECTIONS FOR USE
(For Pest Control Operators Only)**

RATS: Place 4 to 6 ounce of bait in dry containers next to burrows, in runways, or where rats are accustomed to feed. Assure an uninterrupted supply of bait for a period of not less than 12 days and continue baiting until all signs of feeding have stopped. Replace stale, damp or moldy baits with fresh bait.

MICE: Place tablespoonful amounts of bait in shallow containers where mice or signs of mice have been seen. Bait stations at intervals of 8 to 12 feet are recommended. Assure an uninterrupted supply of bait for a period of not less than 12 days.

LOT No.

antibacterial agent) is manufactured under
Alumni Research Foundation, U.S. Patent

KEEP OUT OF REACH OF CHILDREN

CAUTION

This rodenticide contains warfarin, an anticoagulant chemical that reduces the clotting ability of the blood and, upon repeated feedings, causes fatal hemorrhage in rats and mice. It also contains an antibacterial agent which inhibits bacteria that produce vitamin K, an antidote for warfarin.

CAUTION

KEEP OUT OF REACH OF CHILDREN. Protect children, pets and domestic animals from bait. If swallowed by humans, domestic animals, or pets, this material may reduce the clotting ability of the blood and cause bleeding. In such case, intravenous and oral administration of vitamin K combined with blood transfusions are indicated as in the case of hemorrhage caused by overdoses of bishydroxycoumarin.
