## DIRECTIONS FOR USE

- Indoor Applications Residential and Commercial, including restaurants, food processing plants, kennels, and horse stables.
  - A Spray Application.

Apply 0.5% DDVP emulsion as a coarse, wet spray, using low pressure sprayer, to localized areas insects may infest, such as around baseboards, cracks, walls, door and window frames and localized areas of floors. Avoid application to areas frequently contacted by children and do not allow them in treated areas until surfaces are dry. Do not contaminate food, water, food containers or cooking utensils. Do not treat animals. When treating horse stables apply 1 pint 0.5% DDVP to each the square feet of floor area. Application should be made starting opposite exit and working toward exit. Ventilate well before allowing animals to reoccupy the treated quarters.

Treatment of kennels, sheds and other infested areas should be made by applying 0.5% DDVP

A COLLEGE CARLES THE WORD CONTRACTOR STRATES . and we have in 1969, those those the second se  $(\mathbf{r}_{1}, \mathbf{r}_{2}) = (\mathbf{r}_{1}, \mathbf{r}_{2}) + (\mathbf{r}_{2}, \mathbf{r}_{2})$  $(s_{\infty}) = (s_{\infty}) + (s_{$ 

00 A.

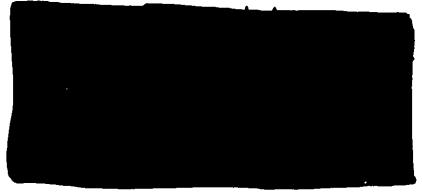

## **Fog or Mist Application**

For food processing plants, industrial plants, theaters, warehouses, horse stables, or kennels for control of flies, mosquitoes, wasps, gnats, fruit flies, and other small flying insects, a 1% to 3% DDVP emulsion or oil dilution may be applied as a fog or fine mist. One gallon of 1% DDVP will treat 64,000 cubic feet. Application should be made when plant or quarters are not in use. Humans or animals should vacate before indoor treatments and not re-enter until premises have been ventilated. Food should be removed and food handling equipment covered (wrapping

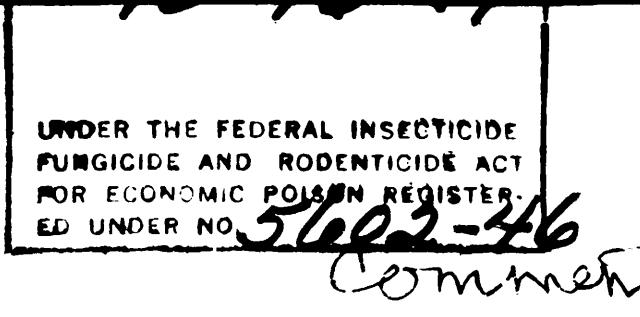

paper may be used) during application or thoroughly washed after application is completed. During fogging or mist spraying indoors a mask or respirator of a type passed by the U. S. Department of Agriculture for DDVP protection should be used.

### **Outdoor Application**

A. Flies, mosquitoes, gnats, and other small flying insects, a 1% to 3% DDVP emulsion or oil dilution may be applied with fogging apparatus or mist blowers, at a rate of 0.05 to 0.1 pound active ingredient (Vapona) per acre. This may be accomplished with a 1% mixture by dispensing 5 pints per acre for the 0.05 pound per acre rate or 5 quarts per acre for the 0.1 pound per acre rate. Areas where food or feed crops are growing should not be treated.
