DIRECTIONS

WARFARIN is a chemical which prevents the blood from clotting normally, and rats and mice are killed by causing them to bleed to death internally. A SINGLE FEEDING IS NOT FATAL. It requires that they eat a small quantity over a period of days. THIS MATERIAL SHOULD BE KEPT AVAILABLE FOR FEEDING AT ALL TIMES DURING THE PERIOD. ADDITIONAL MATERIAL SHOULD BE ADDED TO FEEDING SPOTS UNTIL FEEDING STOPS. CONTINUOUS AND UNINTERRUPTED FEEDING IS VITAL!

GENERAL DIRECTIONS: Place baits in locations where rats and mice feed, water, travel. Bait placements along walls, in corners, and in concealed locations where rats and mice can feed unobserved are desirable. Contaminated or spoiled baits should be replaced promptly.

RATS: Place four ounces of bait per station. This should be the minimum amount used. An uninterrupted supply of bait should be maintained for at least 10 days.

MICE: Tablespoon amounts ($\frac{1}{4}$ to $\frac{1}{2}$ ounce) of bait should be placed at 8-12 foot intervals. An uninterrupted supply of bait should be maintained for at least 15 days.

Data shows that a single rat will destroy several dollars worth of foodstuffs in a single year. Use this product AS DIRECTED for best results — and save money!

FARMERS: CONSULT YOUR LOCAL AGRICULTURAL EXTENSION SERVICE FOR ADDITIONAL DETAILS.

CAUTION

This product contains as its active ingredient an anti-coagulant chemical (Warfarin) which if taken by humans, domestic animals, pets, or wildlife may reduce the clotting ability of the blood and internal hemorrhage may result. PROTECT FEEDING PANS FROM CHILDREN, DOGS, CATS, WILDLIFE, AND LIVESTOCK.

Baits should be placed in areas inaccessible to children, pets, wildlife and domestic animals or in tamper proof bait boxes. Do not reuse container. Destroy when empty. In case baits are eaten, give a tablespoonful of salt in a glass of warm water and repeat until vomit fluid is clean. Call a physician immediately.

NOTE FOR PHYSICIANS: When a human has been known to have ingested this product, blood transfusions combined with intravenous injections and oral doses of Vitamin K are indicated as in the case of hemorrhage caused by overdose of Dicumarol.

Important Notice

WARFARIN, an amazing chemical discovered in the Biochemistry laboratories, University of Wisconsin, and developed by the Wisconsin Alumni Research Foundation. WARFARIN has been tested and approved by qualified recognized regulatory bodies in both agricultural and health service fields. Many public reports have been published. WARFARIN kills by induced internal hemorrhage, after being ingested for several days.
