

DIRECTIONS

Thoroughly mix one part by weight of PIVALYL CONCENTRATE with 19 parts by weight of a suitable bait material such as oat meal, corn meal, cracked corn, etc.

For increased palatability and to facilitate the preparation of baits, corn, peanut or mineral oil up to 5% and sugar up to 5% may be substituted for equivalent amounts of the bait material.

For top efficiency baits should be placed in areas where rats and mice have been observed feeding. Baits should be placed in locations inaccessible to cats, dogs, livestock and poultry.

RATS: Bait in the amounts from ¼ to ½ pound. An uninterrupted supply of bait should be maintained for at least 10 days.

MICE: Bait should be reduced to tablespoonful quantities but more bait stations should be used. An uninterrupted supply of bait should be maintained for at least 15 days.

For maximum results baiting should be maintained as long as infestation persists and rodents continue to feed. Permanent bait stations suitably serviced should be used where reinfestation is possible.

NOTE: Bait stations should be checked regularly and refilled before empty. Baits containing PIVALYL CONCENTRATE have excellent keeping qualities and are highly acceptable to rats and mice. If baits are moldy, soured, or infested with insects, they should be replaced.

CAUTION

PIVALYL CONCENTRATE is an anti-coagulant, which if ingested may reduce the clotting ability of the blood. PIVALYL CONCENTRATE and baits prepared with it should be carefully guarded against feeding by humans, poultry, livestock or pets. If by chance the bait or concentrate is ingested, give a tablespoon of salt in a glass of warm water and repeat until vomit fluid is clear. Call a physician immediately.

Do Not reuse empty drum. Return to drum reconitioner or destroy by perforating or crushing and burying in a safe place.

Baits should be placed in areas inaccessible to children, pets, wildlife and domestic animals or in tamper proof bait boxes.

Do not use or store in or around the home.

NOTE FOR PHYSICIANS: Intravenous injection of Vitamin K₁ is indicated, together with administration of blood transfusions.

SIGNS OF RATS

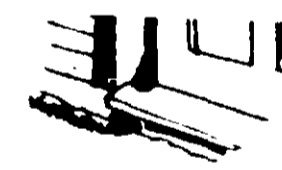

1. Actually seeing rats

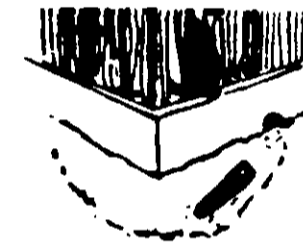

2. Rat droppings, 3/8 to 1/2 inch long, oval in shape. Shiny black droppings are an indication that they have been recently deposited.

3. Burrows in ground near food supplies.

6. Oil smears on walls near ceiling beams.

4. Tracks in snow or dust. Look for tail marks between footprints.

5. Signs of gnawing or damage.
