DIRECTIONS FOR USE

Always use good insecticide sprayers designed for the specific applications. Spray into space to kill flying insects. Spray surfaces as directed to kill crawling insects. Follow directions for best results.

TO KILL ROACHES, WATERBUGS, SILVERFISH, CRICKETS, SPIDERS, TICKS, CENTIPEDES: Apply directly into infested areas and onto infested surface. This drives insects out for contact with the killing mist. Where possible spray heavily all cracks, crevices, under cabinets, sinks, around drains, floors, and any place where these pests crawl, nest or breed. Repeat weekly, or as needed to maintain lasting control.

TO KILL ANTS: Spray along ant trail, into nests, and porch landing. Spray into all openings from which the ants emerge. Repeat as necessary.

TO KILL FLIES, MOSQUITOES, GNATS, WASPS: Discharge spray mist into corners, under furniture and upward in center of rooms. Keep room closed for at least 10 minutes.

TO KILL CLOTHES MOTHS: Brush and air garments. Spray closet walls, floor, thoroughly. Spray clothing completely under lapels, pleats, seams. Keep sprayer a foot away. Repeat in 30 days.

TO KILL BEDBUGS: Spray both sides of mattress liberally, especially tufts and seams. Dismantle bed, spray joints, cracks, etc. Spray walls, baseboards, window trim. Repeat as necessary.

FLEAS INFESTING PREMISES: Can be controlled quickly and effectively by spraying floors and cracks of the infested areas. Fleas lurk in carpets and upholstered furniture. Spray liberally in these areas, as well as in baseboards, wall cracks and sleeping quarters of animals for direct contact with these pests. Repeat as necessary.

For space spraying, adjust the nozzle faucet lever to the position shown to produce a very fine cloud of mist. **FOR BEST RESULTS BEFORE SPRAYING, CLOSE ALL OPENINGS AND TURN OFF AIR CONDITIONING AND VENTILATION SYSTEMS.**

DIRECTIONS FOR FOGGING INDOORS FOR EXPOSED STAGES OR ROACHES, CRICKETS AND ANTS. After closing all air currents and extinguishing all pilot lights, use TRUST at the rate of 2 oz. per 1,000 cubic feet of space, first directing the fog nozzle close into cracks and crevices and then walking down the center of the room directing the fog upward at walls and ceilings as well as swaying the nozzle from side to side to blanket the entire cubical contents of the room. Length of exposure time is 1 hour after filling the room with mist leaving windows and doors closed. After this exposure time, the room should be ventilated at least 1 hour before re-entering; then sweep up and destroy all dead and dying insects.
