

IMPORTANT:

Farmingdale Fruit Tree and Vegetable Insect Spray, which contains Malathion, Methoxychlor and Kelthane, is a specially prepared formulation for the control of fruit and vegetable insects and mites. Apply to both upper and underneath sides of leaves until plants are dripping wet. Protect plants during the growing season by repeating spray applications at 7 to 14 day intervals or as necessary. Dilute 1 oz. (2 tablespoonful) to one gallon of water for spray mixture.

VEGETABLES:

Dilute 1 oz. (2 tablespoonful) to one gallon of water for spray mixture. Use on tomatoes, peppers, cucumbers, beans for flea beetles, aphids, Mexican bean beetles, cucumber beetles, leaf hoppers. Do not use within 7 days of harvest.

FRUIT TREES:

Dilute 1 oz. (2 tablespoonful) to one gallon of water for spray mixture. Spray apples, apricots, peaches, pears, cherries, plums and grapes for protection against aphids, red-banded leaf roller, codling moth, spider mites, plum curculio, leaf hoppers, Japanese beetles, tent caterpillars, oriental fruit moths, bud moths and soft brown scale. Apply at 7 to 10 day intervals or as recommended by State Agricultural Experiment Station. Do not use within 7 days of harvest on apples, cherries, pears and plums. For apricots and peaches, do not use within 21 days of harvest, grapes within 14 days of harvest. McIntosh and Cortland apples, certain varieties of sweet cherries, Bos pears may be injured. For cherries and plums, do not repeat applications within 30 days.
