

A portion of this insecticide combination is deposited on the plant surfaces to give general contact and residual insecticidal action. Another portion gives systemic action, being absorbed through the plant surfaces into the sap system. This gives longer residual effect and controls many insects not exposed to regular contact sprays.

FOLIAR SPRAY: For Roses, Azaleas, Taxus, Rhododendrons and other flowers, evergreens and ornamental fruit and shade trees, mix 2 tablespoons (1 oz.) in each gallon of water. When insects appear, apply spray to hit as many as possible and thoroughly wet all plant surfaces. Repeat weekly on flowers or as necessary on other plants. Early May is the average time for spraying LEAF MINERS on shrubs, trees and lawns. Repeat in 10 days.

List of Plant Insects Controlled on Flowers & Ornamentals:
 Aphids, Leaf Hoppers, Mites, Red Spider Mites, Insects

LAWN SPRAY: For ANTS, CLOVER MITE, etc., mix the same amount of water and spray after treating the above. Repeat weekly on lawns and shrubs. This mixture can be water applied to each as needed.

Keep pets and children off treated area until spray dries.

PATIO SPRAY: For ANTS, CLOVER MITE, etc., mix the same amount of water and spray after treating the above. Repeat weekly on lawns and shrubs. This mixture can be water applied to each as needed. Do not spray patio furniture. Keep children and pets out of treated area until spray dries. Dilution: 3 tablespoons per gallon of water. For all other insects, mix 1 qt.
