Great Lakes Chemical Corporation

Shipper's name required hereon for shipments by EXPRESS

POISON

ANTIDOTE

- Remove victim to fresh air immediately
- Keep victim lying down and warm
- Give artificial respiration if breathing has stopped
- Call a physician immediately

DANGER

Poisonous liquid and vapor

- Vapors can be fatal if inhaled
- Contact with methyl bromide can cause burns
- Do not get in eyes, on skin, or on clothing
- In case of contact wash skin thoroughly with soap and water for at least 15 minutes
- Remove contaminated clothes and shoes immediately and thoroughly aerate before re-use
- Get medical attention
- Brom-O-Gas 0.5 is not to be stored in or around the home
- Brom-O-Gas 0.5 is not to be used in or around dwellings except by pest control operators
- Do not breathe vapor

NOTE: Seller warrants that the product conforms to its chemical description and is reasonably

GENERAL FUMIGATION DIRECTIONS

For specific information on dosage, uses, insect problems, procedures, or safety precautions consult Great Lakes Chemical Corporation.

This fumigant may be used in box cars, warehouses, fumigation vaults, food and cereal mills, ships and bulk grain storages. Do not fumigate if grain moisture is high or if grain temperature is low (below 60° F.) or if there is excessive dockage.

INSECTS CONTROLLED: Granary weevil, grain beetle, rice weevil, caterpillars, mites, bean bugs, grain borers, mealworms, Indian meal moth. Kills insects in all life stages.

RATS AND MICE: Brom O Gas applied by this treatment will kill rats and mice that are exposed to the gas.

SPACE FUMIGATION: The usual dosage rate for each 1000 cu. ft. will range from 1 to 3 lbs., 12 to 24 hours exposure, depending on tightness of structure and kind and amount of commodity in storage.

BULK GRAIN DOSAGE RATES

(General) above 65° F.

Shelled corn 2 lbs. each 1000 cu. ft.

Wheat (similar) 3 lbs. each 1000 cu. ft.

small grains:

Milo (grain sorghum) 4 lbs. each 1000 cu. ft.

Consult Bulletin GLK 128 for further use and safety information.

CAUTION: Extinguish all flames such as pilot lights and glowing heating units to avoid corrosion.

Do not use dosages higher than recommended unless this may be necessary to control

DWELLING FUMIGATION DIRECTIONS

(PEST CONTROL OPERATORS ONLY)

Dwelling to be fumigated is made gas tight using a tarpaulin which has been staked and or earth mounds placed on the ends of the tarpaulin. Area to be fumigated is calculated and the Brom O Gas introduced. Dwelling is to be posted showing date of fumigation. Following fumigation, dwelling is to be ventilated for several hours or until testing with a halide leak detector indicates dwelling has been aerated.

Subterranean termites in tunnels will not be controlled unless gas is introduced into those areas by a special procedure.

INSECTS CONTROLLED: Termites, wood borers, and any other insects (cockroaches, fleas, spiders) in gas tight fumigated dwelling. Brom O Gas will control all insects and trapped rodents within the treated structure.

DOSAGE RATE: The dosage rate for each 1000 cu. ft. will range from 1 to 3 lbs., and 12 to 24 hours exposure.

CAUTION: Extinguish all flames such as pilot lights and glowing heating units to avoid corrosion.

REMOVE: All pets, furs, horsehair articles, patent leather articles, rubber goods, synthetic detergents and photographic materials.
