WHEN TO TREAT

WHEN TO TREAT Patients with severe or moderate disease should be treated with a statin. For patients with mild disease, treatment should be based on the presence of other risk factors. For example, a patient with mild disease and a family history of premature coronary artery disease should be treated with a statin. For patients with mild disease and no other risk factors, treatment should be based on the patient's overall health and the physician's judgment.

SOIL PREPARATION

SOIL PREPARATION For each treatment, the soil was prepared by turning over the top 10 cm of the soil in the pots and then the top 10 cm of the soil in the field. The soil was then left to settle for 2 weeks before the plants were planted. The soil was then left to settle for 2 weeks before the plants were planted.

For Deciduous Orchards: Forest and Nursery Crop Planting Sites

For Deciduous Orchards: Forest and Nursery Crop Planting Sites—Plant in areas over a half-acre, streams 10 feet wide, and in other tree sites in the forest. Spacing with a grid, 10 to 12 feet between trees, 10 to 12 feet deep in the stream. 12 feet apart. See by crosswalk with the forest.

WHEN TO PLANT

WHEN TO PLANT: Under most conditions, the best time to plant is in the fall. Use 10 gallons of TERRACIDE 300 for 100 gallons of soil to be treated. Allow additional time before planting if temperatures are below 60°F. For a thorough treatment, repeat. Do not plant into the treated area until the soil has returned to its normal state and the grass has begun to grow. Repeat the treatment several times.

Soil treated with 100 g/kg or 200 g/kg of fertilizer before planting in a bare-rooted tree and shrub planted sites requires a 100 g/kg or 200 g/kg of fertilizer. Before planting, dig a 40 cm planting hole to the depth of 100 cm.

Consult your State Agricultural Extension Service regarding local conditions. If you are interested in treated soil do not use transparent plastic mulch, because that could carry soil-borne pests from infested and clearing soil, before it is sterilized.

GENERAL DIRECTIONS

USE TERR O CIDE 30 0

such as meadow grass, clover, lucerne, etc. and stubby root-styled dacha plants, such as radishes, worms, garden centipedes, nematodes, etc. and plants, as beans, beets, carrots, celery, cabbages, cucumbers, cucurbits, leucumbers, melons, etc. and other plants, spinach, sweet potatoes, white potatoes, tomatoes, etc. as cotton, peanuts, sugar beets, and tubers, and other crops, such as floral crops, pineapples, strawberries, etc. and fruiting sites, ornamentals and fruiting trees, etc. and other crops, treat soil each year. Do not use any extra fertilizers.

DISEASES Use 30 gallons per acre for control of insects and diseases.

WHEN TO TREAT Treat tomatoes for nematodes as soon as they are suitable. Soil temperature below 60°F is not favorable for egg development. Dry or wet soils retain fumigant longer than moist soils. In general, the longer the soil is in the field, the better. Fall treatment is suggested for early planting of tomatoes, eggplants, celery, tomatoes and melons. For eggplants, tomatoes, eggplants, and melons, cover crop.

APPLICATION Over a 100-year history, the Ager has been the sole equipment used to aerate streams 10 to 12 inches wide and 6 to 8 inches deep in the soil. With its special catalyst, the aerator mixes in the air, ring roller, or press wheel behind the agitator at the bottom of the aeration disc immediately to break rocks and then aerates the bottom of the stream.

Row (Band) Treatment: August: Directly injects to same standard as for
Inject at least 6 to 8 inches below the final soil surface. Begin with 1000 cc. of
Plant directly in treated strip.

Citrus Replanting Sites. Space holes 18 to 24 inches wide and about 12 to 14 inches deep over all.

For Deciduous Orchards, Forest and Nursery Crop Planting Sites — In 2 x 4 ft. areas, apply over all or in strips 10 feet wide. Individual tree sites can be treated by injecting with a handgun in a 10 foot area. Inject 10 to 12 in. diameter with spacings 12 inches apart. Seal by pressing soil with the foot.

WHEN TO PLANT: Under normal conditions, a waiting period of one week for each 10 gallons of TERR-O-CIDE 30 D soil fungant used should be allowed. Allow additional time before planting if temperatures are below 60° F. or if there has been heavy rain. Do not plant until the fungant odor has left the soil. If during the exposure period there are heavy rains followed by low temperatures, work the soil several times.

Soil treated with massive doses of fumigant before planting, such as for deep-rooted tree and shrub planting sites, requires a 3 to 6 months waiting period. Before planting, plow or open planting hole to thoroughly aerate soil.

Consult local State Agricultural Extension Service regarding local conditions.
To avoid reinfestation of treated soils, do not use transplants from untreated areas
that could carry soil borne pests from infested land. Clean up carefully before
using.

1. If the nematode rates are 1000 per acre
2. For fast forming nematodes increase dosage to 30 gallons
3. For medium slow forming less than 30% organic matter use 30 gallons per acre
4. For slow forming nematode in citrus, inject on 18 inch centers 12 inches deep. Keep free of citrus is capable to burrowing nematodes for 2 years before replanting to citrus

NOTE Symphylans (garden centipedes) and wireworm treatment:

For control symphylans (garden centipedes) and wireworms on beans, beets, carrots, cole crops, corn, onions, parsnips, peas, sweet potatoes, tomatoes, turnips, strawberries, peanuts and nursery crops. **SYMPHYLANS** — Use only over all (broadcast) at 30 or more gallons per acre and apply during late summer or early fall when soil is warm. **WIREWORMS** — Use only over all (broadcast) treatment at 25 or more gallons per acre.

GENERAL SCHEDULE

CAUTION Note carefully. Fumigation may temporarily raise the level of ammonia nitrogen and soluble salts in the soil. This is most likely to occur when heavy rates of fertilizer and fumigant are applied to soils that are either cold, wet, acid, or high in organic matter. To avoid injury to plant roots, fertilize as indicated by soil tests made after fumigation. To avoid ammonia injury or nitrate starvation, or both, to crops, avoid using fertilizers containing ammonium salts and use only fertilizer containing nitrates, until after the crop is well established and the soil temperature is above 65° F. Certain crops including cotton, sugar cane, and pineapple are tolerant to ammonia and the above rule does not apply to them. Liming highly acid soils before fumigation stimulates nitrification and reduces the possibility of ammonia toxicity.

PHYSICAL OR CHEMICAL HAZARDS
COMBUSTIBLE

DO NOT USE, POUR, SPILL OR STORE NEAR HEAT OR OPEN FLAME. DO NOT CUT OR WELD CONTAINER.

ENVIRONMENTAL HAZARDS

To avoid injury to fish and other wildlife, do not spill or empty into streams, ponds, or any other bodies of water. Do not contaminate water by cleaning of equipment or disposal of wastes.

FIRST AID

IF INHALED, remove to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen. Call a physician. IF ON SKIN, immediately flush skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. If water is not immediately available, remove excess chemical from skin with absorbent material such as towel or dry soil, then proceed at once to location where water is available and thoroughly wash contaminated skin with plenty of water. Call a physician.

IF IN EYES, immediately flush eyes with plenty of water for at least 15 minutes. Call a physician.

IF SWALLOWED, immediately induce vomiting by giving two glasses of water and sticking finger down throat. Call physician. Never give anything by mouth to an unconscious person.

DIRECTIONS FOR USE HANDLING PRECAUTIONS

DO NOT INHALE VAPORS: NIOSH- or MESA-approved respiratory protection should be worn when product is exposed to the atmosphere or when conducting operations which vent to the atmosphere. A NIOSH- or MESA-approved half-face respirator with chemical workers, goggles or full-face respirators shall be used during small spills, repairs, calibrations, transfers, sampling and when working in poorly ventilated areas. When in use canisters or cartridges shall be replaced daily or sooner if specified by manufacturer or at first sign of odor breakthrough, whichever comes first. NIOSH-approved cartridges, such as a Weish 7400-IL will be adequate for short-term situations such as listed above.

Where very high concentration of vapors might be expected (such as large spills in poorly ventilated areas) a self-contained or air-supplied respirator should be used.

DO NOT GET ON SKIN. When handling or working with product, wear clean body covering including gloves and heavy footwear. Immediately remove contaminated coverings. Aerate and wash all protective clothing and gear thoroughly after use.

There are no protective clothing materials that are completely impervious. Rubber, vinyl protective gear, thin layers of polyethylene (minimum 1 mil), give short-term protection and shall be immediately discarded upon contamination. Heavy (3 + mil) polyethylene, rubber, and neoprene provide longer term protection. Leather gives no protection. If gear becomes contaminated, immediately wash with soap and water. Never wear protective gear having the odor of 1,3-Dichloropropene. Wash and aerate all protective gear thoroughly after use until all odor is gone.

DO NOT GET IN EYES. Wear eye protection such as chemical worker's goggles or full-face respirator when handling product.

DO NOT SWALLOW. Do not use the mouth to siphon product from containers or to blow out clogged lines, nozzles, etc.

STORAGE, SHIPMENT AND DISPOSAL

STORAGE: Store in tightly-closed original container in a cool place away from dwellings. Do not allow contamination of seeds, plants, fertilizers or other pesticide chemicals. Do not contaminate food, feedstuffs, drugs, or domestic water supplies. In outside storage, store drums on sides to avoid accumulation of rain water in top or bottom recessed areas.

SHIPMENT: Do not ship or store in food, feeds, drugs, or clothing.

DISPOSAL: Rinse equipment and containers and dispose of wastes, including spills or rinsates, in a landfill approved for pesticides or by burying in non-crop lands away from domestic water supplies. Punch holes in containers before disposal. Dispose of empty containers in approved landfill or bury in a safe place. Consult Federal, State or local disposal authorities for approved alternative procedures.

DO NOT REUSE ORIGINAL CONTAINERS SUCH AS DRUMS

Empty returnable cylinders should be returned freight collect to Great Lakes Chemical Corporation's location from which the shipment was made. Consult local sales office if questions arise.
