RECIRCULATING COOLING WATER SYSTEMS. When used as directed, BromiCide Granules effectively controls algal, bacterial and fungal slimes in commercial and industrial cooling towers; influent water systems such as flow through filters, and lagoons, etc.; heat exchange water systems; industrial water scrubbing systems; brewery pasteurizers; and industrial air washing systems equipped with a mist eliminator. Add BromiCide Granules using a bypass feeder or broadcast into an open area in the system such as a cooling tower basin or deck, where sufficient agitation is present to promote rapid mixing and dissolution.

ONCE-THROUGH INDUSTRIAL COOLING WATER SYSTEMS. For the control of algal, bacterial and fungal slimes in once-through and closed-cycle fresh and sea water cooling systems: cooling ponds, canals; and lagoons, add BromiCide Granules to the system inlet water or before any other contaminated area in the system.

Dosage Rates.

Initial Dose: When system is noticeably fouled, add 0.2-0.6 lbs/1000 gallons of water contained in the system. Repeat initial dosage until one ppm bromine residual is established for at least 4 hours.

Subsequent Dose: When microbial control is evident, add 0.1-0.3 lbs/1000 gallons of water contained in the system. Repeat as needed to maintain one ppm bromine residual for at least 4 hours.
