## WEED KILLER AND LAWN FOOD 10-6-4

### DIRECTIONS

#### APPLYING

Product should be applied with a good spreader at rate of 4 lbs. per 1000 square feet. Avoid overlap of spreading by using some type of marker to indicate covered area.

#### TIME OF APPLICATION

Best broad leaf weeds will be controlled by applying when ground is moist and weeds are growing rapidly. For best results, apply several days after mowing. The product cuts grass for several more days.

Controls these and many other broad-leaf weeds:  
Purslane - Dandelions      Buckhorn - Plantain

#### FOLLOW-THRU

Sometimes weed infestation will not be completely killed. A follow up application is desirable if desired results are not obtained in 6 to 8 weeks after first application and will also control new weed growth.

#### CAUTION

- 1 - Apply on calm days.
- 2 - Thoroughly clean all equipment used.
- 3 - Do not use on bank or dikes.
- 4 - Do not store near other fertilizer, seed, insecticides or fungicides.
- 5 - Heavier applications than recommended may be harmful.

6 - Never apply to seed bed or to newly planted areas until after several months of growth.

7 - Avoid contact with skin or clothing. Contaminated clothes should be removed for domestic use.

Do not reuse container. Destroy when empty.

#### SPREADER SETTINGS

Cyclone	4 1/4	Lawn Beauty	6
Scots	6 1/2	Cross Country (Scots)	7
