

DESCRIPTION

A ready-to-use preservative for wood, canvas, and rope. Protects against warping, rot mildew, and termites. The pleasing green color of this preservative makes it easy to identify treated materials and to avoid slips. Can be painted over, if desired, with little or no bleed through. Recommended for use on foundation plates, planter boxes, nursery trays, garden stakes, and fence posts. Prevents mildew, mold, and rot of canvas products such as tents, tarps, and boat covers. Wood that has been properly treated and allowed to dry will not adversely affect live plants. Particularly useful in coastal areas where materials may be exposed to sea air and salt water. An excellent preservative with many household and commercial uses.

DIRECTIONS FOR USE

Stir or shake thoroughly to mix contents. Wood should be dry and free from bark to allow best penetration. Soak wood for a minimum of three minutes or apply, liberally, two or more brush coats. All possible surfaces should be covered, especially end grains, joints, and those to be in contact with the soil. Fence posts should be soaked in preservative for 12 to 48 hours. For proper termite control, treatments should be made after all cuts have been made and before wood is used in the structure.

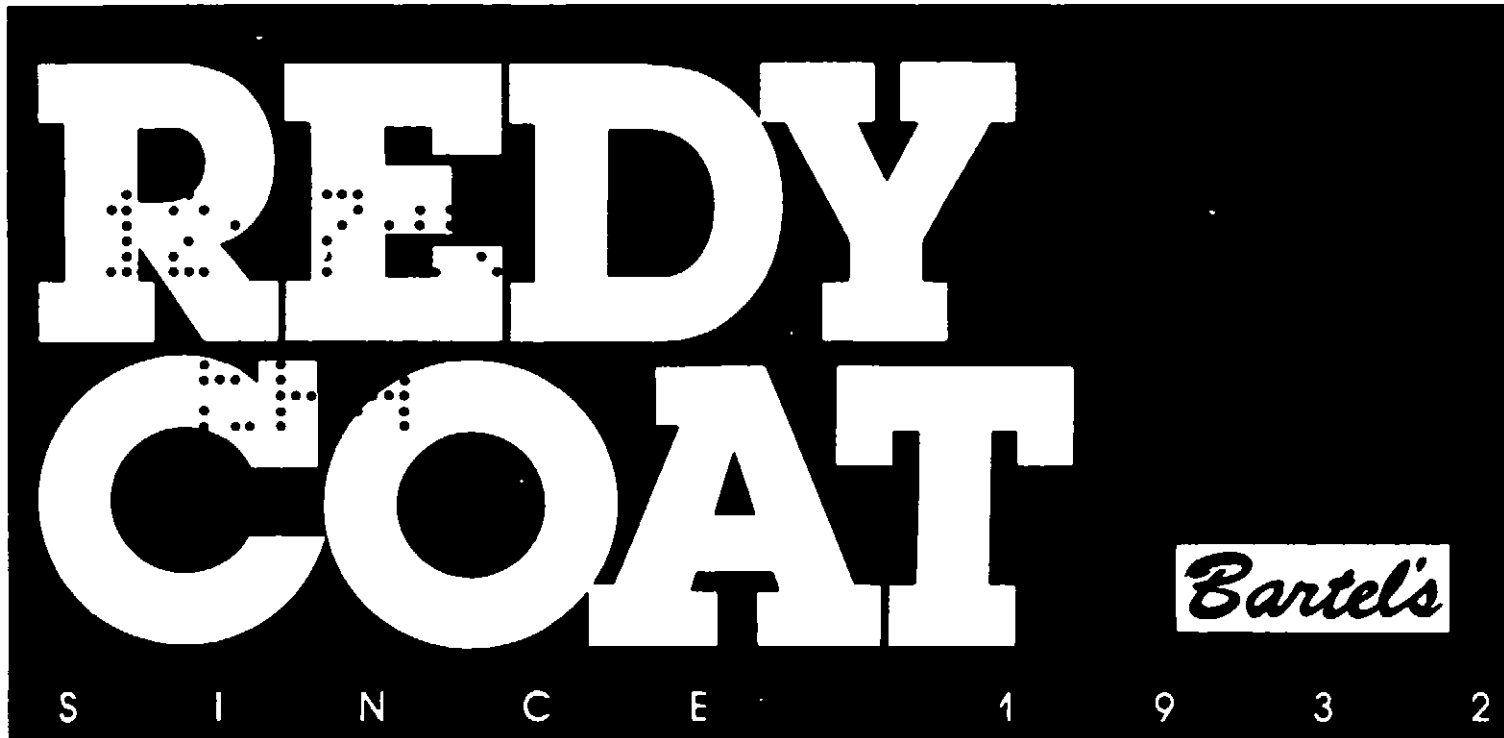

At least 24 hours drying time should be allowed before application of top coats.

Dip or soak canvas and rope until thoroughly wet.

It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

CONDITION OF SALE

Seller makes no warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use and/or handling of this material when such use and/or handling is contrary to label instructions.
