

12" Tempo Bold Caps

DIRECTIONS FOR USE OF SANI-KLEEN

SANI-KLEEN can be used as an iodine sanitizer by adding it to water to produce the desired iodine concentration. For every one ounce of SANI-KLEEN mixed with five gallons of water, there will be 25 ppm iodine in solution which may be safely used as a final sanitizing rinse on food processing equipment and utensils, followed by adequate draining before contact with food.

SANI-KLEEN can be used for sanitizing bottles, crowns and fillers in beverage and food plants. For every 1/2 ounce of SANI-KLEEN to five gallons of water, there will be 12 1/2 ppm iodine in solution.

SANI-KLEEN should be pre-mixed to the desired concentration of iodine content and sprayed on floors, walls and equipment as a final sanitizing rinse. For 25 ppm iodine use one ounce per gallon of water. For 12 1/2 ppm iodine use 1/2 ounce per gallon of water.

10" Futura Med. 26" Wide Let Comf.

SANI-KLEEN

U.S.D.A. REG. NO.

Active Ingredients: ←

Nonyl Phenoxypoly (Ethyleneoxy)
