Dormant Spray

here to the insects or plant surfaces which are being treated. When using as a spreader-sticker, the insecticides or fungicides may be used at the regular strength. Add four teaspoonful of BLACK LEAF DORMANT SPRAY to each gallon of spray being mixed.

SPRAY FOR GROWING SEASON: Scale insects, red spiders, mites, mealybugs, white fly larvae on citrus, fruit, shade trees, evergreens, camellias, azaleas, hardy shrubs, can be controlled by using five tablespoonful BLACK LEAF DORMANT SPRAY to each gallon of water. This application may be used with safety during the growing season.

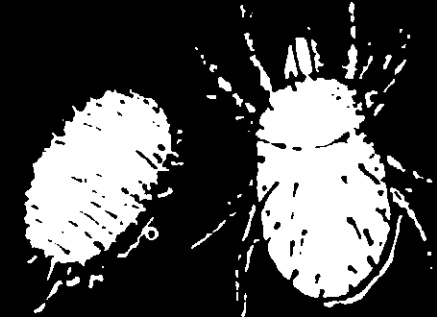

WINTER SEASON: Mix five ounces of BLACK LEAF DORMANT SPRAY with one gallon of water for control of scale insects and insect eggs that were left on the plants. This will help to control many scale insects. BLACK LEAF DORMANT SPRAY will be effective in destroying larvae of red spider and moths.

HOUSE PLANT LEAF SHINE: BLACK LEAF DORMANT SPRAY can be used to brighten the leaves of hardy house plants, by using a mixture of three tablespoonful of BLACK LEAF DORMANT SPRAY per gallon of water. (Do not use on African Violets.)

IN THE GREEN HOUSE: Use two tablespoonful of BLACK LEAF DORMANT SPRAY per gallon of water to control scale insects, red spiders, mealybugs on hardy shrubs, and white flies. Allow 60 days between sprays.

Spreader-sticker during growing season

For year round use to control garden pests: aphids, mealybugs, red spiders, scale insects and white flies

temperatures. Not to be used on maiden-hair ferns, cocos palms, or maples.

CAUTION: Do not re-use empty container. Destroy it by burying with waste or burning. Stay away from smoke or fumes.

Food utensils such as teaspoons and table-spoons should not be used for food purposes after use with pesticides.
